The MONTHLY BULLETIN is edited by the "BURBAU DE DOCUMENTATION" of the Department of Economics and Political Sciences, Aurora University (Shanghai).

Part of the work of the "BUREAU DE DOCUMENTATION" is the systematic filing of all articles in the chief Chinese periodicals (monthly, weekly and daily) which deal with the economic and financial life of the Far East. References on any subject can be found immodiately by means of a detailed card index.

The aim of the BULLETIN, which appears on the 20th, of each month, is to put at the disposal of foreigners the economic and financial points of view expressed in articles in the Chinese reviews. A certain number of these articles are carefully obesen and reproduced each month in English, either in full translation or in the form of digests.

Each article translated or summarized is published separately under the heading "DOCUMENT No...." so as to enable each reader to classify the according to his personal system. A classified index will appear at the end of each year.

Where several articles on the same subject are written from widely divergent points of view the BULLETIN summarizes these points of view under the name "STUDY, No...."

trative acts, which for "Annexes" to the Documents or Studies.

The BULLETIN is being published to meet a definite need and any suggestions as to the best way of meeting that need will be welcomed.

Though the selection, translation and summarizing of the articles and other texts is done under the authority of the Dean's Office of the Department of Economics and Political Sciences, the authors, whose names appear on each Document, Study and annex, are alone responsible for the statements of fact or opinion expressed in them.

as regards the REPRODUCTION of translations and digests published in the Bulletin:

- 1. The Bureau of Documentation reserves to itself the right of permission for the reproduction of its Documents, Studies and annexes, either in whole or in part, in journals or reviews published in the Far East.
- 2. There is no restriction on the reproduction of articles from the Bulletin in other countries, but any editor making use of this privilege is requested to send to the Bureau of Documentation a copy of the review or journal containing the reproduction.
- 5. Every reproduction should be preceded or followed by the acknowledgment; "From the MONTHLY BULLETIN published by the Bureau of Dozumentation (Chinese Economics) of Aurora University, Shanghai".

# MAIN TREADS OF CHINA'S FOREIGN TRADE AFTER THE WAR

Civil warfare together with the unreasonable foreign exchange rate and import control policies of the Government have been the principal factors responsible for the great decline in China's foreign trade since the war. The former has affected the volume of available farm products, which used to represent about 3/4 of the total value of our exports; whereas the latter has more directly hindered the normal exchange of goods.

#### I. - Changes in Foreign Trade Caused by the Civil War.

Civil strife, converting many producing regions into battlefields and causing disruption in communications, has brought about far reaching effects on China's foreign trade.

Despite the fact that a few exports in 1947 could still maintain, or even surpass, their prewar level, a general depression was seen in the export trade. The quantity of egg products, leather and cereals exported in 1947 had decreased by several times as compared with prewar years. Tobacco, cotton and coal which used to be exported on a large scale before the war, became the country's main import items in 1947, though meagre amounts continued to be shipped abroad in that year (See Table I below).

where production was not affected by the civil war, as up to 1947 in the recovered North-East, and in the Taiwan island ever since its emancipation from Japanese domination, exports which were negligible in Chinese trade in prewar time became major items in 1947. Thus the export of soya beans from China was 60,000 quintals in 1936 and 10 times as much in 1947, similarly sugar rose from 200 quintals to 86,000 quintals. Since the North-East has fallen into the Communists' hands, however, the export of soya beans has again diminished.

# Table I. Comparison between Chinese Exports in 1936 & in 1947.

Item	<u>1936</u>		194	<u>7</u>
Pigs	319,000		477.000

Tin Ingots	112,604	Ħ	41,150	11

The civil war has also greatly affected China's imports. As already stated China has now to depend more and more on foreign countries for many of her former main agricultural products. The comparative size of the import of gasoline, diesel oil and banknote paper has also increased. Whereas in 1947 the aggregate import value of raw cotton, tobacco, rice, wheat, wool, gasoline, diesel oil and banknote paper represented only a little more than 1/2 of the total value of Chinese imports, they made up over 1/3 in the months January-April 1948.

Table II. Percentages of Main Items in the Total Imports for 1947 and Jan.-April 1948.

Item	7 of 1947	Total Imports Jan, -April 1948
Raw Cotton Tobacco Rice, Wheat and Wheat Flour Wool Gasoline Diesel Oil Drawing & Bank-note Paper TOTAL:	0.9 0.5 0.7 1.1 0.54 0.46 0.02 4.22	9.2 2.7 6.0 2.1 5.9 6.9 1.9 34.7

£.

There is another aspect of the trade problem which deserves our attention. The foreign trade of North China having been stifled by the battles raging there, the trade centre is moving towards the South. Thus the percentages in China's imports and exports representing the northern ports of Ch'inhuangtao and Tientsin are steadily shrinking; while those related to the southern ports have been increasing; in Shanghai, Kachsiung and Kowloon for exports and in Amoy, Keelung and Swatow for imports (See Tables III & IV below). There was, however, an exceptional drop in the official export figures for Canton in 1948 as compared with the previous year, but this fact can be explained by the smuggling activities between Canton and Hongkong.

Table III. Percentages of China's Exports Representing Various Ports for the Periods Jan.-May 1947 and Jan.-May 1948.

Port	JanMay 1947	JanMay 1948
Ch'inhuangtao	5.88	0.20
Tientsin	10.44	7.60
Teingtao	1.37	1.26
Shanghai	47.93	62.26
Foochow	0.22	0.20
Amoy	0.73	0.21
Keelung	2.17	0.97
Kaohsiung	1.68	6.27
Swatow	2.16	1.99
Canton	13.72	7.68
Kowloon	6.22	9.56

Table IV. Percentages of China's Imports Representing Various Ports for the Periods Jan.-May 1947 and Jan.-May 1948.

C

Port	JanMay 1947	JanWay 1948
Ch'inhuangtao	1.59	0.78
Tientsin	6.13	2.48
Tsingtao	1.39	1.30
Shanghai	79.38	79.18
Foochow	0.07	0.10
Amoy	0.38	1.86
Keelung	0.24	2.80
Swatow	0.95	1.12
Canton	4.60	3.52
Kowloon	4.05	3.57

#### II. - Foreign Trado Sacrificed to Finance.

It may be said that in the economic conditions of the past few years, the Government's foreign exchange and foreign trade policies have been motivated almost exclusively by considerations of national finance. The Central Bank fixed the foreign exchange rate at an extremely low level, with the purpose of artificially raising the external value of the Chinese dollar, while the activities of the Central Trust in monopolising the exports, and the strict control exercised by the Import-Export Board have been simed at securing foreign exchange for Government needs and at curtailing its expenditure whatever may be the consequences for the normal chammes of trading activities.

There is no doubt that the unreasonably low exchange rate has had an adverse effect on China's export toade. The exports dropped from a monthly average of US\$19,200,000 in 1947 to one of US\$16,500,000 during January-May 1948. Though relative improvement was witnessed in March-May 1948, this was mainly due to seasonal movements as exports of agricultural products usually increase in spring and summer. Another reason for this slight improvement was that the Government undertool huge amounts of exports at conditions which, though uneconomical in the classic sense, could offset the hindrances imposed by the unfavourable exchange rate.

Conversely, exports improved whenever the exchange rate was readjusted to higher levels. The experience of June 1948 is a good instance of this matter: as a result of the introduction of the new "foreign exchange certificate system" which actually raised the exchange rate, the export value increased to nearly US\$20,000,000 in that month. But it dropped again in July to US\$18,000,000 owing to the new and growing gap between official and black market rates.

As has been mentioned before, the Chinese Government has continually cut down the import quota with the purpose of saving foreign exchange. From Feb. 1947 to July 1948, the average quarterly reduction was 20%.

Table V. Import Quotas for the First Six Quarters (Jan. 1947 - July 1948).

€

	Quarter		Quota	Reduction
lst	Quarter	(FebApril 1947)	US\$99,700,000	0
2nd	u u	(May-July 1947)	72,600,000	27%
3rd	H	(AugOct.1947)	67,900,000	6.5%
4th		(Nov.1947-Apr.1948)	53,400,000	بَبُر 21
5th2	} "	(Feb Apr. 1948) each averaging	2 36 70 <b>0.000</b>	30%
otn	<b>'</b> #	(MSA-101A 1849), cook diesagani	3	J -7-

EDITOR'S NOTE: 1) The import quotas for the 7th and 8th quarters actually approved by the Executive Yuan on Sept. 15th 1948, totalled US\$42,141,000, showing a reduction of nearly 43% as compared with the aggregate appropriation for the previous 2 quarters.

NOTE: 2) It may be pointed out that gasoline, diesel oil and tobacco were listed under items of U.S. Aid in the import quota for the fifth quarter (Feb.-Apr.1948). Since they constituted 44.7% of the fifth quarterly quota, the actual amount of permitted imports was only US\$20,390,000, or approximately US\$6,800,000 per month.

Before September 1947, imports were comparatively free from control and were undertaken in large quantities: their value averaged US\$45,000,000 monthly during the first eight months of 1947, and was US\$59,000,000 in July and US\$53,000,000 in August. The figures descended sharply, however, after the enforcement of the import quota system. They went down to US\$34,000,000 in September and US\$22,000,000 in December, the monthly average for the period September-December being US\$29,000,000. The situation was at its worst in February 1948 when only US\$14,000,000 worth of incoming shipments were reported. The meagre increase in the following months was due to the Government rather than to orders from private firms. This may be seen from the fact that the chief items which recorded a rise, were, on the one side, foodstuffs, cotton and fertilisers, all imported by the Government, and on the other, diesel oil and gasoline which had been put under the management of the Government-operated China Petroleum Corporation and of a few foreign firms.

It must be admitted that the Government's strict import control has brought some improvement in the trade balance. The trade deficit of China during 1947 amounted to US\$250,000,000, averaging US\$20,800,000 per month for the whole year and US\$19,000,000 during the period January-May 1947; while in the same period January-May in 1948 it was only US\$8,300,000.

It is interesting to note in this respect that although the trade returns of the Chinese Customs' showed trade deficits, the Import-Export Board reported a favourable balance. Imports inside and outside the scope of the quota approved by the Import-Export Board, aggregated US\$9,921,000 in May and US\$7,921,000 in June 1948 (see Table VI below), whereas according to incomplete figures issued by the same Board, the Government's intake of foreign exchange derived from exports approximated to US\$16,000,000 in May and US\$20,000,000 in June, thus netting a gain of US\$6,000,000 in the former month and of US\$12,000,000 in the latter.

Table VI. Foreign Exchange Granted for Imports during the Months Jan.-June 1948.

Í

released by the Import-Export Board

Month	Schedule II	Schedule I and Schedule III (A)	<u>Total</u>
January February March April May June	US\$10,233,000 8,351,000 6,178,000 11,584,000 8,508,000 6,632,000	US\$2,101,000 2,957,000 2,532,000 2,412,000 1,413,000 1,289,000	U8\$12,334,000 11,288,000 8,710,000 13,996,000 9,921,000 7,921,000
TOTAL	51,486,000	12,684,000	64,170,000
Monthly Average	8,581,000	2,114,000	10,695,000

However, this improvement in the trade balance, was only achieved through sacrificing the country's needs. As a result of import restrictions, the prices of many important necessities imported from abread, rose higher than other commodity prices. For instance, white newsprint costing only CN\$3.00 per ream before the War, soared to CN\$47,000,000 in Shanghai at the beginning of August 1948, i.e. 15,700,000 times higher; and the prices of metals at about the same time were 8,900,000 times their prewar level. Meanwhile the contemporary index number of general MONTHLY BULLETIN NO.XXI - October 1948 - Document 105 - Page C

wholesale prices in the city, as compiled by the China Institute of Economics, was only 5,500,000. Another consequence was that many industrial enterprises in this country hand; capped by the shortage of raw materials, had to reduce the scale of their operations or suspend business altogether.

Things came to such a children stage that the Government itself began to realise that new measures should be taken to break the deadlook. It was undensited however that any new move should not risk curtailing the Government's foreign exchange resources, now be allowed to stimulate black market operation in gold and U.S. currency noise. Thus, imports aport linking proposals were rebuked as hindering the Government from increasing its disponible currency; while imports against payment with self-provided foreign exchange were considered by the Covernment authorities as a temptation to black-marketing the grandacks

after many deliberations, his Government promulated on July 30th, 1948, the Measures for Applications to Import Capital Held by Overseas Chinese or Capital Held Abroad by Chinese Nationals for Investing in Home Productive Entervises. According to these Measures, proof had to be established that the capital concerned really belonged to absence a the hosses or in the case of obtained that they had been ledged in foreign banks before Juny 30th 1948. With this new set of measures, the Government expected a forthcoming supply of raw materials sufficient for 6 menths! requirements without incurring the dangers alluded to. Soo many difficulties were involved in this device and it proved of no avail.

# III. - Concentration of Export Business.

The third feature of the Thinese Foreign Trade . since the war has been the nature of the export business.

A common practice among experters has been to hoard export commodities when the exchange rate was unfavourable and to ship them at once as soon as the rate was revised. This, however, could only be done by firms disposing of a large capital and thus the smaller ones were promessively eliminated. Smuggling also could be successfully carried on only with the backing of a few magnates usually associated with powerful cliques.

Such a de facto monopoly gave the remaining exporters the power to control prices of export commodities at hore and thus to resp huge additional profits. Tea from T'unch'i and Ch'ouchen for instance was contracted at US\$0.50 per pound C.I.F. to pay only US\$0.30 per pound F.O.B. Shanghai. The same happens to bristles whose prices at home are many a time heavily cut down. This is of course very detrimental to the production of goods destined for export and to the farm economy as a whole.

As already mentioned, the Government has been underby the low foreign exchange rate fixed by the Central Bank. It must be noted in this respect that while some exports can be undertaken by private exporters, others are completely reserved to the Government, such as cotton yarn, cotton piece goods, mineral products, soya beans from the North-east and augar and camphor from Taiwan.

wholesale prices in the city, as conciled by the China Institute of Economics, was only 5,500,000. Another connequence was that many industrial enterprises in this country handicapped by the shortage of raw materials, had to reduce the scale of their operations or suspend business altogether.

Things came to such a collinal stage that the Government itself began to realise that new measures should be taken to break the deadlook. To was understood however that any new move should not risk curtailing the Government's foreign exchange resources, now be allowed to stimulate blook market operation in gold and U.S. currency notes. Thus, import—export linking proposals were reduked as handering the devenment from increasing its disponible currency; while imports against payment with self-provided foreign exchange were considered by the Government authorities as a temptation to black—marketing in greenbacks

after many deliberations. The Government promulated on July 30th, 1948, the Measuren for applications to Import Capital Held by Overseas Chinese or Capital Held abroad by Oninese Nationals for Investing in Home Productive Enterprises. According to these Measures, proof had to be established that the capital concerned really belonged to Torseas Chineses, or in the case of deposits made abroad by Chinese rationals, certificates had to be obtained that they had been ledged in foreign banks before June 90th 1948. With this new set of measures, the Deverment expected a forthcoming supply of raw materials sufficient for 6 menths! requirements without incarring the dangers alluded to. Noo many difficulties were involved in this device and it proved of no avail.

## III. - Concentration of Export Business.

The third frature of the Chinese Foreign Trade since the war has been the nature of the expert business.

A common practice among experters has been to hoard expert commodities when the exchange rate was unfavourable and to ship them at once as soon as the rate was revised. This, however, could only be done by firms disponing of a large capital and thus the smaller ones were propossively eliminated. Smuggling also could be successfully carried on only with the tacking of a few magnates usually associated with powerful cliques.

Such a de facto monopoly gave the remaining exporters the power to control prices of export commodities at hore and thus to reap huge additional profits. Tea from T'unch'i and Ch'ouchen for instance was contracted at US\$0.50 per pound C.I.F. North Africa a short time ago; yet tea exporters' firms consented to pay only US\$0.30 per pound F.O.B. Shanghai. The same happens to bristles whose prices at home are many a time heavily cut down. This is of course very detrimental to the production of goods destined for export and to the farm economy as a whole.

As already mentioned, the Government has been undertaking exports on a large scale, its activities not being hindered by the low foreign exchange rate fixed by the Central Bank. It must be noted in this respect that while some exports can be undertaken by private exporters, others are completely reserved to the Government, such as cotton yarn, cotton piece goods, mineral products, soya beans from the North-east and sugar and camphor from Taiwan.

The same phenomenon of concentration has been witnessed in the import field. A large portion of the business has been monopolised by the Government, while the greater part of the imports accessible to private concerns have been shared among a few privileged merchants and foreign firms.

Among importers to whom foreign exchange was granted by the Import-Export Board for the month of March 1948 under Schedule II, 6 firms got appropriations totalling US\$3,290,000, or nearly 53.3% of the total import quota. Of these 6 firms, only one was Chinese, i.e. the Government-operated China Petroleum Corporation, while the rest were all foreign companies. Agair, in April of the same year, 7 firms shared altogether 42.3% of the total quota; and though 4 of these firms were Chinese, viz. the Central Trust, China Textile Industries Inc., China Petroleum Corporation and the Chung Hwa Book Company, they received only one half as much as the 3 foreign firms.

The same thing happened in the distribution of permits for non-quota imports under Schedule I and Schedule III (A). Although 100 firms were granted foreign exchange for these items in the month of March 1948, 15 of them aggregated US\$626,000 or about 24.7% of the total; of these firms. 11 were owned by foreigners and secured US\$430,000, while 4 Chinese firms, the Government-operated China Vegetable Oil Comperation, Hai-Nan Railway and Mining Company, China Textile Machinery Company, and Hai Hsin Development Corporation, were allotted US\$230,000. Again, in April 8 firms received a total allotment amounting to US\$245,000 or about 13.1% of the total amount under Schedule I and Schedule III (A). Of this amount of US\$245,000, US\$117,000 was shared by 4 Chinese companies, the China Vegetable Oil Corporation, the Taiwan Aluminium Company, the Yung Hua Coal Mining Company, and the China Portland Cement Company, and the rest was granted to foreign firms.

According to the Far Eastern Economic Review, mimports undertaken by private concerns represented only 30% of the total imports in the first quarter of 1948, while private exports made up only 20% of the total exports during that same period. Such is the magnitude of the Government's interference with the foreign trade of our country.

٠;

The foregoing analysis, however, has not shown all the aspects of the monopolisation of foreign trade by bureaucratic and foreign capital, for this has also infiltrated into some private factories and it is no easy task to make an estimate of it. Furthermore, with the newly activated U.S.Aid, the trend of concentration is becoming even more acute, as foreign firms alone are said to be entrusted with the import of supplies coming under the agreement.

Date of Issue:

New China Magazine (Hsin Chung Hua) July 16, 1948.

Number of pages: 10

TRADE BETWEEN CHINA AND THE SOUTH SEAS, PAST AND PRESENT

Although the Peace Treaty with Japan has not yet been comcluded, the third year after the war has seen the reopening of Japanese private trade by SCAP on Aug. 15, 1947, in spite of strong remonstrances, and the fartical recovery of her South Seas markets. As a retaliatory measure against this policy, the Chinese of these countries have started a movement there to boycott Japanese goods.

The South Sea Land, with their tropical or subtropical elimate, abundant rainfall and fertile soils, produce many valuable exports, such as coconuts, rubber, hemp, sugar, rice, coeca, and papper which, together with tin and petroleum, are exchanged for daily necessities and manufactured goods from all over the world. With such valuable natural resources it is no wonder that these countries, with their population of 130 million, have tempted the eupidity of colonizing powers.

As early as the Ts'ing and Han Dynasties Chinese were migrating to the South Seas where their industry built up a solid economic foundation. The tradition has been continuous and even to-day, in the Dutch East Indies, Malaya and the Philippines most of the merchants, both wholesale and retail, are Chinese. Penetrating deep into the countryside they exchange Chinese goods for the products of the native villages which they then ship to their home markets in an ever increasing trade.

#### I. - Before the War.

In spite of its long history, before the war China's trade with the South Seas was kept on a comparatively small scale by the active competition of Great Britain, the USA, Holland and Japan.

1) IN THE PHILIPPINES, both export and import trade were mainly with the USA, in virtue of a preferential trade agreement. After 1933, Japanese imports were on the increase, and only a small percentage of trade fell to China, which ranked after the USA, Japan and Great Britain, while the Philippines ranked tenth among the countries exporting to China. The balance of trade was

(

favourable to China, whose exports, from 1934 to 194% exceeded her imports by about CN\$13,062,000 per year.

These exports consisted mainly of textile goods, including fibres, botton piece goods, yarn, thread and knitted goods; foodstuffs, largely eggs and egg products, ham and bacon, of which the Philippines took 30% of Unincis total export, and lard; coal and other fuels; and vegetable oil. In return China received most of her supply of raw hemp, together with timber, sugar, melasses, coconut oil, fruits and tobacco.

2) THE DUTCH EAST INDIES supplied 6% of China's total imports, coming after USA, Japan, Great Britain and Germany; while China only supplied 25 of the imports into the Dutch Bast Indies, ranking eighth among the importing nations. The balance of trade was therefore unfavourable to China which piled up a trade deficit amounting to 436,431,325 customs silver taels in the years between the inauguration of the Chinage Customa's service in 1868, and 1933. This continuous det. It was counterbalanced, however, by the remittances of oversea. Chanese settled in the East Indies. China's principal exports were cotten goods, beverages and foods, with considerable quantities also of china and earthenware, paper, timber, wooden wares, chemical products, machinery and tools.

From the outbreak of the Sino-Japanese War until 1941, the Dutch East Indies imported large quantities of Chinese cotton yarn, for which there was a steady market in the Java and "Matula" region. Textiles imported were mainly jean, sheetings and native cloth, with increasing supplies of towels, socks and underwear, both for natives and for local Chinese. The latter were the chief importers of foodstuffs such as meat, dried vegetables, fresh and dried fruits and tea; and also of firecrackers and tinfoil. In return the Eutch East Indies exported to China in 1938, 67.6% of its petroleum which fell to 66.9% in 1939, and 54.8% in 1940. Other exports were sugar, petroleum products, quinine, kapok and pepper.

3) MALAYA was one of China's largest customers, taking much more than she sold, so that the balance of trade was favourable to China until 1933. She imported foods, including animals and animal products, vegetables; fresh and dried fruits, fish, seeds, wine, tea, drugs and spices; textile products such as cotton piece goods, yarn and thread; paper and tinfoil; china, chemicals, leather and leather goods. Exports were chiefly rubber, foodstuffs, including beverages and sea food, pepper, timber, tin, paints and ives.

1) INDOCHINA maintained a favourable balance of trade against China, owing to her bulk experts of rice and to the keen competition of French goods. China's trade deficit averaged 13,184,000 customs gold units from 1334 to 1938; but she had a favourable balance of 16,610,000 C.G.U. in 1939 and of 34,319,000 in 1940. Her chief imports were rice and coal, for which during the war years Indo-China was almost her only entrepot and source of supply, cement and fish. In return she exported action goods, vegetables, paper, wheat flour, tea, fruits, sugar and tobacco, with small quantities of raw silk and sponges.

5) SIAM. The trade between China and Siam has always been small, averaging 10,000,000 customs silver taels in 1932 and between 12 and 16 million customs gold units from 1935-39. It was also one-sided, maisting almost entirely of Siamese rice which made up 88.41% of the imports, with another 5.70% teak and other timber. Chinese exports, mainly cotton yarn, cetton goods, MONTHLY BULLETIN NO.XXI - October 1940 - Document 106 - Page 2

**A** 

vegetables, fruits and paper; only averaged a total value of 3 to 5 million oustoms gold units, so that from 1935-1939 she had an average annual trade deficit of 6,483,000 customs gold units.

6) BURMA. China's trade with Burma has also been small in volume, averaging less than 1% of her total foreign trade up to 1939 though there has been a slight increase since then. It is of much the same type as the Siamese trade: imports of rice and timber set off by small quantities of silk and cotton goeds and foodstuffs for the use of the overseas Chinese.

7) HONGKONG has always been a very important entrepot and transhipment centre not only for British goods but also for foodstuffs from South East Asia destined for China. Before the war it dealt with 30% of China's total exports, mainly seeds, mineral ores, vegetables and vegetable products, silk and cotton piece goods, drugs and spices, raw silk, peanut eil, tung oil, lard, livestock and fresh and dried fruits. In return China imported through Hongkong manufactured goods such as metal goods and machinery, chemicals and woollen goods, sea products, cereals, books and paper, maintaining however a favourable balance of trade.

8) BRITISH NORTH BORNEO. Trade with British North Borneo was controlled by the North Borneo Trade Company and the population there is scanty and undeveloped, so that the volume of trade has never been large and the balance has been unfavourable to China. In return for timber and mineral oil she exports mainly vegetables, stoneware and earthenware with a few miscellaneous trade goods.

#### II. - The Years 1946 and 1947.

Trade with the South Seas, suspended during the war, has revived under new conditions, since the colonies have all been fighting for their independence from the war exhausted countries of Europe. China has need to exert herself if she is to regain her prewar markets. Since the war her trade has been chiefly with Hongkong, Singapore and the Philippines. In 1946 over 50% of her imports from the South, with a value of CN\$67,220,123,000, came from Hongkong, 23% came from Malaya by way of Singapore and the rest from the Philippines, Siam, Burma, the Dutch East Indies & Borneo. Her exports for the same year were valued at CN\$146,099,000,000, 79.68% going to Hongkong, 6.7% to Singapore and 3.7% to the Philippines. Exports to North Borneo totalled only CN\$33,000.

In 1947 the South Seas supplied about 8.6% of 38.38% came from Singapore, and 21.32% from Hongkong. Experts increased from 33.02% of her total exports in 1946 to 44.65% in 1947. 76.54%, with a value of CN\$2,179,373,506,000, went to Hongkong, 7.53% to the Philippines, 6.86% to Siam, 5.95% to Singapore, 2.07% to the Dutch East Indies, 0.62% to Burma, 0.4% to Indochina and to North Borneo only two thirds of the preceding year's amount.

If the South Seas trade is taken as a whole, China's trade balance was favourable in both years, with an export surplus of CN\$16,635,719,000 in 1946 and CN\$1,926.970,003,000 in 1947. If however the trade with each place is considered separately, she had a favourable balance only with Hongkong in 1946, and with Hongkong, the Philippines & Siam in 1947. With Singapore her trade deficit in 1947 amounted to nearly CN\$184,000,000,000.

The following table shows the actual values of China's South Seas trade in 1946 & 1947, and their relation to the total volume of her exports and imports.

Source of material: Returns of Foreign Trade of China, published by the Chinese Customs House. Remarks: (-) = trade deficit. (+) = favorable trade balance.

The goods exchanged since the war between China and the South Seas are almost the same as before the war since both demand and production have changed very little. Cotton products have been exported in greater quantity however, owing to the rapid development of the Chinese textile industry, and in 1946 textile fibres, yarn, thread, piece goods, knitted goods and other textile products made up 34.31% of the exports to the South Seas, increasing to 53.58% in 1947. This represented 25.21% of China's total export of textiles in 1946 and 37.93% in 1947. 60% of these exports of textiles went to Hongkong. textiles went to Hongkong.

The principal other products exported to the South Seas in 1947 and the relatively few imports are shown in the following Tables.

Item	Valuo in CN\$1,000	% in China's Total Expert of Said Item	Remarks
Qils & Waxes	528,346,188	43.23	95% to Hongkong
Animals & Animal Products	463,216,180	38.92	Largely to Hongkong
Metals, Mineral Oren & Metalware	109,862,751	32.04	
Fresh & Dried Fruits	68,802,499	96.95	Largely to Hongkong
Vegetables	64,119,879	93.77	Hongaong
Paper (including tin-foil)	34,143,203	91.83	

Since imports from the South Seas was not active, the varieties of goods were limited. The following table shows, by order of their importance, some of the main items and their values

<u>Item</u>	Value in CN\$1,000	in China's     Total Import
Candles, Scap, Cils, and Fats	237,073,774	of Said Item 14.00
Rice	196,780,288	56.54
Hemp and Manufactures thereof	193,401,943	84.1
Metals, Mineral Ores, and Metalware	46,308,735	58.50
Medicinal Substances and Spices	20,754,149	73,49

Geographically, historically and economically it seems obvious that trade should develop between the tropical newly developed States of the South Seas, as yet without industries and temperate China with her urgent need for large quantities of rubber, petfoleum, iron, coconut oil and rice. Another factor is the presence of 10 million Chinese among the 130 million population of the South Seas. Growing industrialisation on both sides, with a consequent rise in the standard of living, will only increase the possibilities for mutual trade.

#### III. - Competition with Japan and Measures necessary to meet it.

Though the breaking up of the prewar South Seas trade, which was dominated by Great Britain and Japan, has in some ways created a situation favourable to China, there are still many difficulties to be faced. The independence of India and Burma, together with her internal problems, has reduced Aritish trade, now confined to Malaya and Hongkong, far below its prewar level; but Japan remains a formidable rival. The formidable trade deficit resulting from her heavy imports from America were formerly set off by trade with the South Seas, her most important foreign market. Since her defeat, although no Peace Treaty has yet been signed, Japan has already resumed her foreign trade, in the form of international barter in September 1945, and by the revival of private foreign trade on August 15th 1947. For the past year and

a half from 60 to 75% of Japan's exports have been sent to Asiatic scuntries, principally in the South Seas. In 1947 20% of her total exports went to the Dutch East Indies and the percentage doubled in January 1948. These exports were mainly textile products but also comprised large quantities of clothing, glassware, porcelain, enamelled goods, stationery, metalware, toys, sea products and industrial raw materials, all at low prices.

Under American protection Japan is aiming at still further development of her South Seas trade: 52% of her exports are, according to plan, to be sent to the U.S.A. and China, the entire remainder, 48%, to the South Seas. From an estimated total production for 1948 of 1,100,000 400-pound bales of cotton yarn, 900,000 bales are destined for the Dutch East Indies, Siam and India. Textile products are estimated at 50.6% of the total exports the first year, and 40.6% of the second.

Since the exports of China and Japan cover practically the same items, their trade comes into direct conflict, and if definite plans are not made and put into effect China may lose her markets.

The following measures are suggested as most

- The Government should change its present neglect of the South Sees trade for encouragement expressed in a definite long term trade plan and policy.
- Protest should be made against any help being given by the U.S.A. to Japan to enable her to gain the South Seas market against the interest of allied nations.
- 3. Chinese resident in the South Seas should be helped to rebuild their business and also used as agents to extend Chinese trade among the villages. The native peoples should also be helped to increase their production and so raise their purchasing power.
- Chinese products should be standardised in quality and size and adapted in form and colour to the demand of the South Seas markets.

1

- 5. Prices should be kept low, both by diminishing production costs and by being content with smaller profits until trade is well established. The Japanese gained the South Seas markets by working on the principle that where purchasing power is low the cheapness of the goods offered is more important than their quality.
- The Government should develop the shipping facilities to the South Seas in order both to increase the freightage and lower its cost.

Periodical:

Monthly (Taiwan Kung Ch'eng Chieh)

Mines in Taiwan".

Date of Issue:

May 20th & June 20th, 1948.

## COAL MINING AND TRADE IN TAIWAN.

Coal reserves in Taiwan are estimated at 400,000,000 tons, or about 1/555 of the total reserves of China.

Though this figure is not high, exploitation of the mines has always been active. The average output of coal under Japanese domination was 1,500,000 tons per year in prewar days or about 1/12 that of China; it reached a peak in 1941 with 2,850,000 tons but dropped to 1,910,000 tons in 1944, owing to shortage of labour comittel and equipment labour, capital and equipment.

The present output is approximately 1,800,000 tons per year, the value of which represents over 80% of the total value of all minerals produced in Taiwan and is equivalent to 6 times the value of the bananas produced on the island, 7 times that of the pineapples and 15 times that of the tea. Besides supplying the province, coal is shipped regularly to Canton, Amoy, Foochow and the Shanghai-Nanking areas.

It is also worth mentioning that over 40,000 persons are directly engaged in coal mining and if their families and other people more or less dependent on the business are taken into account, the total number is well over 600,000 or about 1/10 of the entire population of Taiwan.

## II. - Geological Formation and Coal Measures.

Coal beds in Taiwan belong to the Tertiary Era and are mostly found North and West of the Central Mountain Range. The lower beds lie among clay, slate and sandstone, and lower down still, gneiss, crystalline limestone and crystalline schists of a metamorphic character.

There are three series of coal measures, containing from 2 to 5 seams each: the upper lying 1,200 metres above the middle and the middle 900 metres above the lower. The thickness of the various seams is tabulated below:

#### (in metres)

Measures	lst seam (upper)	2nd seam	3rd seam	4th seam	5th seam	6th seam (lower)
Upper	(apper)	0.39		0.45		(20.02)
Upper Middle	0.24	0.30	0, 39	0.60-0.90	0.37	
Lower		0.30	0.37	0.50	0.37	

The interval between the seams is from 10 to 30 m., while their dip varies from less than 10 to more than 80 degrees though it is most commonly between 20 and 35.6 degrees. 2 seams in the upper measures are being exploited at present, 2-3 seams in the middle measures and 2 seams in the lower measures.

In general, the coal field sinks gradually in a southerly direction.

The Upper Measures have a total thickness of 1.400 metres. Their strata are formed alternately of soft sandstone and shale; and since they have been much affected by weathering, a strip of hilly terrain has resulted. The outstanding feature of these measures is that the upper part contains white, crisp sandstone, with very indeterminate stratification, which is suitable for making glass. This sandstone is especially abundant in the Heinchu district where its thickness reaches 100 metres. Some outerops occur in the Heinchu district at Kuanhsi and Nanchuang; but it is mainly found in the Talpei district at Wuliao, Shuiliutung, Tach'i and Pachieh in the Tach'i sub-district; Sanhsia in the Haishan sub-district; Ank'eng in the Wenshan sub-district; and Heichie in the Ch'ihsing sub-district.

The Middle Measures, with a thickness of 1,500 m., are the most important of the three. They are well represented by what is locally called the "Szuchiact'ing System", to which belong the majority of the mines under exploitation in Taipei. Above the coal seams, at 400 m. deep, is the so-called "Nankang sandstone", 45 m. thick, of a dark brown colour and containing limestone. The rocks here are hard enough to withstand weathering, and many precipitous cliffs have thus been formed. The lower part of the measures, 300 m. thick, contain sandstone and shale.

The Lower Measures are 1,000 m. thick and like the upper measures have the special feature of containing soft white sandstone. Their outcrops are mainly found at Shihmen and Nanku in Panch'iao; T'utzuk'eng in Yingke; and at Neihuhsiang and Tawulun. The upper part of these measures lies among limestone, basalt and tufa, while the lower part contains strata of white rough-grained sandstones called the "Yuanshan strata", 1,000 m. thick and hard. The outcrops of these "Yuanshan strata" occur half way up the Northern slope of the Tawulun Mountain and on the Southern slope of the Malien. No such "Yuanshan strata" appears however, in the Hsinchu district. The coals of these measures are very hard and suitable for coking.

Changes in the earth's crust have caused much folding and faulting in the various coal measures which have thus become much more irregular than those in China Proper. The faults follow an east-westerly direction, but their axis lies ENE-WSW, parallel to that of the island.

These irregular thrust planes coupled with the thinness of the coal layers constitute a great handicap to prospecting and explaitation. It is, however, partially offset by the relative frequency of the outcrops.

#### II. - Coal Fields and Reserves.

There are two main coal fields in Taiwan, the Northern and the Southern. Taken as a whole, they stretch in a south-westerly direction from the coastal areas near keeling in Taiped district to the Ta-an-ch'i (River) in Hainchu district, covering an area of 2,000 sq.km. The total length of the two coal regions is 160 km., while their width is most variable: 35 km. near Keeling; 20 km. near Yingke, 10 km. near Kuanhai and 20 km. near Chunan.

The Northorn Coal Field consists mainly of the Szuchiaot'ing and the Mushan systems. The former lies along the Keelung River from Juifang to Heichih and Nankang, the latter along the Tsungkuan Railway, from Takanlin (N.W. of Keelung) to Tawulun, Heientung, Luliao, Hungnei, Peishihhu, Shantzuchiao, Shulin and T'aoyuan. Among other systems belonging to the northern coal field are the T'ienliaokang, Chinpaoli and Shihti. The Southern Coal Field comprises the Sanhsia-Tach'i, Kuanhsi, Shihtushan and all other systems located in the Heinchu district.

There are also small coal fields scattered here and there, as in the districts of Taighung (Chichitashan), Tainin (Alishan, K'engneibsiang & T'ainan), Kachsiung (Ch'ishan, Hsinwei, Lilungshan, Hengch'un & Sant'ai, Taitung, Hualien and P'enghu (i.e. Pescadores). But whether they have economic value has not yet been ascertained.

It is estimated that the coal mining regions will in the future occupy 733,772 hectares distributed as follows:

Taipei district	578,907	hectares
Huinchu district	137,501	
Taichung district	17.534	

Ĺ

The mines at present under exploitation are all located in areas north of the Ta-an River in the district of Tairei: they occupy a total area of 85,032.2 hectares.

Approximate reserves in the various measures are evaluated as follows:

Measures	Reserves (u Above Sea Level	nit: metric ton) Below Sea Level	<u>Total</u>
Upper	6,023,000	30,436,000	36,461,000
Niddle	55,362,000	285,464,000	340,826,000
Lower	8,154,000	35,807,000	43,961,000
TOTAL	69,529,000	351,709,000	421,248,000

30 far 52,720,000 metric tons or about 1/8 of the total has been exploited.

## III. - Type of Coal

Generally speaking, brown coal occurs in the upper measures and low grade bituminous in the mirals and lower, the latter under high pressure has in many places become high grade bituminite, suitable for use in boilers and for coking.

The physical properties of the coal vary with the amount of expansion and contraction it has undersons; where this has been great the seams have undergone severe granding and crushing and their mode of cleavage has been altered. Containly it breaks into more or less square blocks; but the upper measures split into thin pieces, which been very brittle and easily crushed and powered. Where there has been expansion and contraction much more of the coal is thus reduced. The colour is also affected: normally the upper measures are black, the middle and lower dark brown; but it tends to be brown where it is powdered. The lustre is normally glassy in the trougher measures and greasy in the lower; after undergoin, collarssion stresses it becomes jet black.

The specific pravity of the coal is from 1.2 to 1.3. Taiwan coal centains many impurities, such as shale in the upper nessures and the so-called 'Taiwan mark' in the middle measures. The admixture increases where there has been fracturin; but all these impurities can be removed by hand picking on washing.

As regards the chemical characteristics the follewing table speaks for itself; the water, ask and subphur contant and auto-combustion are the main drawbacks.

## Chemical composition of Taiwan Coall)

NOTE: 1) For a detailed analysis of the various coals according to mines, see the appendix at the end of this study.

MONTHAN Bellinti Montal - October 1946 - Document 107 - Fage 7

With regard to coking properties, only coals from the lower and middle measures come into question. Up to now, history, the coke obtained is far from satisfactory owing to its high ash and sulphur content. The coal of Calapa and Manchuang, in the Hsinohu district appears to be of better quality for metallurgical coke but neither of these fields is yet under exploitation.

B. Analysis of cokes obtained from various soals in Taiwan.

IV. - Exploitation.

(

as the coal seams in the mines in Taiwan are very thin and irregular in structure, the scale of their exploitation is much shaller than in China Proper.

In the collieries now being worked on the island, there are as yet only horizontal and inclines shafts but no vertical pits. Most of the shafts are constructed in the same direction to reach the seams, and it is sometimes necessary to excavate the rocks and make inclined shafts to a depth of several hundred metres to over 3,000 metres before arriving at the coal seams. The average shafts have an average dip of 20 degrees, though this may vary from 10 to 30 degrees.

In digging the shafts, large quantities of rock have usually to be removed. For this purpose, holes are first drilled in the rocks either by man power or by compressed-air drills, LONTHLY BULLETIN NO.XXI - October 1948 - Document 107 - Page 2

and then explosives such as nitro-glycerine or dynamite are utilised. These explosives which formerly came from Japan, are now imported from England and the USA. It is expected that safety explosives produced by the manshinchiao ractory under the Coal Mining Co. c. Talwan, will be widely used in the near future.

On account of the presence of fire damp in the coal seams, electric lights are used in the mines in order to ensure safety, and electric power is also employed for ventilation and pumping water.

The advancing long-wall method is largely adopted for coal mining on the island. Only picks are being employed as coal-cutters cannot be used on the narrow seams.

Coal is transported in pushcars to the entrance of the shafts. In the case of inclined shafts, it is pushed to the junction between the galleries and the shafts and is then hadle up by windlasses. In deeply inclined shafts, several successive windlasses have to be installed: for instance, the inclined shaft of the Juifang Ne.1 line is 3,500 m, long and it has become necessary to install 3 windlasses in 3 successive sections.

The means of transportation between the collings and railroad stations depend on the distance as well as on the topography. In some places light railways have been built and pushcars or even locomotives are used (e.g. in the Chiling, inline No.1 & 2 mines). Where there is no railway, trucks are used instead (as in the Hsintien, Wenshan, Hsinchu and Chunan mines;. In the mountaisous regions where no other transportation means are possible, wire ropes and power conveyors are installed for the purpose (as in the Juifang No.2 and manli No.1 mines).

The coal mines in operation in Taiwan approximated to 200, when production reaches its peak in 1941. The number half diminished by nearly one half at the conclusion of the far. After the taking ever by the Chinese Government, many old mines resumed operation; and at present, 240 mines are being exploited while 40 more are unser preparation.

## Number of mines operating in the last eight years.

Year		of shafts Rorizontal	Total
1941	112	98 *	210
1945	62	47	109
1946	75	79	154
1947	82	101	183
1948 (Exy-June)	90	150	240

REMARKS: Both in 1941 and 1945 all the mines were operated by private concerns.

In 1946, the Taiwan Provincial Government operated 73 Lines, while 100 were exploited by private interests.

In 1947 there were 73 mines under the management of the Government, and 110 private-owned. At present (May-June 1948), 87 mines are operated by the Government, and 153 exploited by private enterprises.

The monthly output of coal in Taiwan since the take-over is indicated in Table A. below, while Table B gives the production in the various administrative sub-districts for the first four months of 1948:

Table A. Monthly Output Oct. 1945-April 1948

	donth	Output in e.t.		wonth	Output in L.t.

Table B. Production in Various Sub-districts (January - April 1946)

District	Number of dines	Output (metric tons)
Taipei:		•
Keelung	123	323,715.35
Haishan	34	87,918.05
Wenshan	28	51,280,97
Chihsing	25	32,724.78
Hsinchu:		
Chunan	11	17,799.15
Taoyuan	11	11,693.35
Hainehu	7	5,721.19
Chutung	5	5.532.35
maoli	,	577.00
TOTAL	246	536,962,19

(

Of the total amount, Government-operated mines, numbering 87, produced 245,184.79 metric tons; whereas private mines, numbering 153, yielded a total of 291,777.40 metric tons.

In order to understand what the postwar rehabilitation has achieved, it may be interesting to look at the pact oproduction, indicated in the following table.

MONTHLY BULLETIN NO.XXI - October 1948 - Document 107 - Page 10

Year	Production (metric tons)	<u>Year</u>	Production (metric tons,
1926	1,794,511	1937	1,953,346
1927	1,857,257	1938	2,198,542
1928	1,583,59	1939	2,610,877
1929	1,530,025	1940	2,841,414
1930	1,598,726	1941	2,853,832
1931	1,421,544	1942	2,356,313
1932	1,354,995	1943	2,237,725
1933	1,533,103	1944	1,913,937
1934	1,520,926	1945	794,558
1935	1,595,672	1946	1,057,639
1936	1,743,777	1947	1,307,858

It is clear that though the mines actually operating at present are more numerous than during the time of the Japanese, production is still lagging behind. This is tue to the fact that the number of inclines shafts (see Table below y which yield more than horizontal galleries, is below the 1941-1941 left and that the productivity of newly-exploited mines is still shall during the preliminary stages. It therefore seems advisable to resume the exploitation of as many old mines as possible instead of opening new ones. The owners of new mines should also be instructed to use inclined shafts.

if all the coal mines, both government and printer, are considered as a whole, then their present monthly output averages 600 tons per mine, though it may vary from several score to more than 3,000 tons. There are now 35 mines which are yielding 1,000 to 3,000 tons of coal every month, while only 6 mines have a monthly output of more than 3,000 tons (see Table below).

The Output of more important mines during the first four months of 1948.

#### V. - Present Trade and Prospects

The sale of coal produced in Taiwan is under the control of the Coal Regulation Commission. The government intervention in the sales for local consumption, abolished in Autumn 1946, was restored in April the next year. The trade in coke has been set free within the limits of the island since February this year; but export to other provinces is still under government direction.

The coal trade may be divided into 3 categories: local consumption, export and shipping.

Under the Japanese occupation local consumption assumed great importance aspecially during the period 1930-1945. it was 3.7 times the export figure in 1936; 3.2 times in 1941, 10 times in 1944 and 20 times in 1945. The situation has greatly changed since 1946 when Formosa was returned to China: fairly large quantities of coal are being despatched to the mainland equalling as much as 86% of the local consumption in 1946.

MONTHLY BULLETIN NO.XXI - October 1948 - Document 107 - Page 12

# Annual sales of coal 1936-1948 (metric tons,

1936	<u>a.)</u>
1937 853,20c 407,915 1,003,606 2,209 1938 885,478 5cc,750 89c,810 2,369	904
1938 885,478 500,750 890,810 2,369	729
	033
	.964
1940 1,159,476 667,877 869,282 2,706	-
1941 1.565,580 479,127 515,345 2,550	•
1942 1,521,727 352,130 436,610 2,442	
1943 1, 59,581 334,699 356,304 2,250	•
1944 1,389,542 134,742 380,709 1,904	•
	.757
	469
1947 625,943 431,878 47,092 1,104	•
	,175

Lf we classify local consumption by use we see that railroads and ougar-alcohol factories have received the largest coal allotaents during the past two years and a half.

The distribution of coal consumption (metric tons)

	1946	1947	1948 (first 4 months;
Railroads	145,698	164,518	68,136
Sugar-alcohol factories	112,745	105,042	78,588
Cement factories	26,8v5	60,756	41,771
Electric power plants	16,610	45	3,700
Ceramics industry	20.526	83.033	24,978
Textile industry	17,076	30,357	15,620
monopoly Bureau	9.658	20,466	6,004
Retail '	27,126	57,487	12,412
Others	66,748	103,635	85,510
Total	453,060	625,943	335,721

It should be noted that factories in Southern Taiwan frequently suffered from coal chortage in the past owing to the limited capacity for railroad transportation. Though the despatch of coal from the North by sea route (from healung to Machsiung) was strenghthened by the end of 1947, no real improvement was achieved on account of the tardiness of the shipments and the high costs for loading and unloading. The situation has now been greatly relieved by the raising of the railway transportation capacity to 120,000 tons in January this year. As a sonsequence of the civil war, coal shortage has often been experienced on the mainland and increasing demands for Taiwan coal have been made from China Proper: Shanghai and Canton being the two leading ports for coal shipments from Taiwan.

AUNTHLY BULLETIK NO.XXI - October 1948 - Locument 107 - Page 23

Following active investments from all quarters and strenu us efforts made by mining circles, the coal business in Taiwan has been enjoying a relative prosperity. Whether further improvements may be achieved in the future, will largely rest upon four factors: Equipment, Capital, Coal Price and Dame etc.

Mining equipment has been sold by the Coal Registron Commission at ceiling prices and has been greatly instrumental in increasing the production. It is expected that U.S. aid to China will furnish further machinery.

The problem of working capital has been solved by the Coal Regulation Commission which grants loans against stocks of coal as security. If large sums are needed, recourse may be had to the Bank of Taiwan with the mining equipment as security.

Profit is a great stimulant for increasing production. The price of coal should be fixed in such a manner as to ensure a reasonable margin of gain for the producers. It is aspecially important to readjust it from time to time so as to keep pace with the general price trend. The price of coal was below the general commodity price index during the year 1945. After successive revisions, in June, august and October 1947, however, it came nearer to the average price level. It ultimately surpassed the general prices in December 1947, and made further strides shead in February and March 1948.

	Month	General Commodity Index	Coal Price Index (first grade slack)
1937		100.0	100.0

MONTHLY BULLETIN NO.XXI - October 1048 - Document 107 - Fage 14

The project drawn up by the provincial government to increase the output of the various important industries in the three years 1948-50, seems to promise a growing demand for coal on the island itself.

## Projected annual Industrial Output (1948-1950)

Industry	1948	1949	<u>1950</u>
Sugar Cement Paper Fertilizers Cast Iron Bricks, Tiles	400,000 tens 360,000 tons 30,000 tons 19,800 tons 12,000 tons 120,000,000 pcs.	450,000 tons 500,000 tons 37,000 tons 30,000 tons 15,500 tons 150,000,000 pcs.	600,000 tons 55,000 tons 30,000 tons

The consumption of coel for shipping purposes in past 10 years, its menthly average approximating to 90,000 tons. The largest muthly requirement since the taking ever was received in February 1948 when 10,142 tons were consumed. The present lecling is due to the limited shipping tonnage during the preliminary postwar period, and is only temporary. When international trade and especially trade with the bouth Pacific Islands resumes its past magnitude, more ships will call at Taiwan and the demand for coal will again increase.

all these factors seem to premise well for the coal mining industry in Taiwan.

(See Appendix on the following rage...

Metallic Ores In Kiangsi.

1

Study No. XXII

Number of pages: 12

# Articles And reports digested and combined in this Study.

"Geology of the Iron Deposits in the Lower Yangtze Region" by C.Y. Hsieh, a memoir published by the National Geology of Survey of China and the Institute of Geology of the National Academy of Peiping, April 1935.
"Geology of Western Klangsi" by P. Kao and K.C. Hsu, a McCompublished by the National Geological Survey of China and Institute of Geology of the National Academy of Teiping, December 1940.

"Tungsten discovered in Hsingkuo", the Mational Journal of Commerce, April 1947. "Minerals in Mangsi Province", Shen Pao, July 2, 1947.

(Continued in the note on page 12)

## METALLIC CRUS IN KIANGSI

At the end of the war the general plan of reconstruction and development for the Province of Miangsi gave resisted importance to the better exploitation and utilisation of local metallic ores. The Leposits of iron, manganese, tungsten, tin, bismuth, molybdenum and barite ores listed below were the object of special projects.

Ores	Site of Deposits	<u>Hsi en</u>	Projected Output
fron	Mushi hshan	Yunghsin	1,000 tons daily
<u> manganese</u>	uchi eh باروChung	Lop'ing	not fixed
Tungsten	Hsi huashan Tachi hshan Kwei mei shan Huamei ao P'ankushan Shi aolung	Tayu Ch'i ennan Lungnan Hsi ngkuo Anyuan T'ai ho	100 tons monthly 100 " " 50 " " 100 " " 20 " "

Barite	Ts'inglienshan	Linch'uan	not fixed '
MONTHLY BULLET.	IN NO.XXI - Octobe	r 1948 - S	Study No IXII - 1 - 2

Plans had also been drawn up for developing Onlang-shu (Tienho) into a medium sized metallurgical centre comprising an iron works, a refinery for alloys of tungsten, buseuth and molybdenum with iron, and a tin refinery.

None of these prospects has been realise, so far; but at present, when development of the Southern provinces is more important than ever, it is interesting to recall briefly the various resources in metallic ores in mianger on which such plans and projects had been based.

#### I. - Iron Ore.

Iron ores in Giangsi belong to three different groups distinguished by their formation:

- i Those of hydrothermal origin situated along the Yangtin Northern Liangsi. Two localities have been prospected so fone at Chiengmenshan in Liukiang and the other at Tiunglingsham in Juichiang.
- ii Those formed in sedimentary rocks belonging to the Deficia. Period and distributed in Western Kiangsi. The principal minima districts are found at Shangchuling in Pinghsiang, Wushinsham T'aihushan in Yunghsin, and T'iehk'uangao and Chulingao in Lierhua.
- iii The iron sands widely distributed in the ditches and river beds in the granite regions of southwestern and southeastern kiangsi. They are of little if any economic value.

Iron ore reserves in Kiangsi are estimated at about 15,500,000 tons (iron sames being omitted) :

Iron Deposits	Reserve (Tons)	Remarks
Chiengmenshan (Kiukiang)	6,288,000	
T'unglingshan (Juich ang)	580,000	
Wushihshan & T'aihushan	· ·	The reserve at T'ai-
(Yunghsin)	5,360,000	hushan is said to be
•		100,000 t. only
Shangchuling (P'inghsiang)	2,000,000	
T'iehk'uangao & Chulingao		Reserve at Chulingao:
(Lienhua)	1,226,000	360,000 tons only.
•	15,454,000	

(

about 23 km. W. of Fiukiang in Northern Alangs: and 17 km. N.J. of the Shaho station of the Kiukiang-Nanchang Railway. They may be reached either by Shaho station or by boat from Kiukiang direct to Ch'engmenshan. The region has a number of lakes and rivers which are navigable during the wet sesson.

Chiengmenshan is the name for a group of hills surrounding the small, shallow lake called Chiengmenhu, which in a wet summer season may be flooded nearly up to the slopes of the surrounding foot hills. These hills are of moderate height, rising some 100-150 m. above the alluvial plain or about 200-240 m. above sea level. The hilly region forms an anticlinal structure with the lake Chiengmenhu occupying the centre of the anticline. Geologically speaking, the hills are composed of lower Silurian samistone and shale in the centre of the anticline and quartzite of Devonian-carboniferous age on both flanks with Permian limestone and coal series exposed on the south flank.

MONTHLY BULLETIN NO. XXI - October 1946 - Study No. XXII - Page 2

Iron deposits in the form of detached ore-bodies of various sizes are found in an area from Chinchitsui in the North to Shaochiwa in the South, a distance of more than 1 km. The ore consists chiefly of hematite with some limonite, often mixed with a high percentage of silica. Chemical analysis shows that the ore may show 30-63% of iron and 3-49% of silica.

according to air. Jong Jen-hao and Air. C.C. Wang, the length of the ore body varies from 300 to 500 Letres, with a width of from 90-180 metres, the ore body at Tiehmenk'an being the largest and the richest. The total reserve has been estimated by Mr. Jong Wen-hao at 6,288,000 tons (only ore with more than 40% iron content being considered).

According to Mr. C.C. Wang three different grades of ore may be distinguished :

- i High grade hematite with more than 60% of iron which i found at Chinchitsui and Tiehmenk'an but constitutes only about 1/3 or 1/4 of the total reserve.
- ii Limonite containing 50-60% of iron which occurs principally at Shaohuoshan, Yangt'ienlo and Hsiaoyaop'o.
- iii Poor siliceous limonite with only some 30% iron which seems to form the bulk of the ores

1

A part of the Ch'engmenshan, covering an area of 498.5 mow between Tayaop's and the west of T'iehmenk'an and in the northern section of Chinehitsui, was bought by the Han Yeh Ping Company. The rest of the hills mainly belong to the Kiangsi provincial Government. Neither part has been exploited so far.

- 2) T'UNGLINGSHAN IRON DEPOSITS. Located 45km. ... of Kiukiang in the Juich'ang district 20 km. from the capital city. The shortest way to the Hsiu River is towards sat'ouchen 12 km. K. The ora is chiefly hematite with some magnetite and limonite. Average iron content is 50%. Reserves are estimated at 560,000 tons.
- west of Yunghsin, the deposits are 70 li from the haien capital, 50 li from Lienhua in the North and 60 li from Mingkang in the south. The mining area is 8-13 li from Loukianghau where it is drained by the Hoshui which is navigable for 200-ton barges except in winter.

exists in the ore boiles in two strata of which the main one is 1-3 metres in thickness.

The ore reserve is estimated at some 5,000,000 tons; the average composition is given in the following analysis:

 Iron
 50.00% & above
 \$102
 17.00%

 Phosphorus
 0.47%
 \$1203
 5.00%

 Sulphur
 0.03%
 Ca0
 0.88%

 Manganese
 0.32%
 MgO
 0.35%

For forty years the deposit has been exploited by native methods. An iron works established at T'ienho in 1940 by the Provincial Government and the National Resources Commission, utilized the ores from Wuhsihshan, as well as from T'aihushan.

MONTHLY BULLETIN NO.XXI - October 1948 - Study No.XXII - Page 3

Maximum output was reached in 1942 with 20 tons daily. Heavily damaged during the Japanese advance in 1944 it has not been rehabilitated since.

W of Yunghsin. The main ore body, composed of purple coloured shale and sandstone of the Shangchuling series, is found on the northern slope of the hill. Park brownish coloured limonite of irregular size is distributed in the meolian rocks and in the loans soil of reddish brown colour.

5) THE SHANGCHULING IRON DEPOSITS are 37 Am. So of P'inghsiang and 14 Am. south of the P'inghsiang-Chuchow Railway, a branch line connecting the P'inghsiang coal fields to the Cantana Hank'w Railway. Marine colitic hematite of the Upper Devenian formation is found in the upper portion of the Shangchuling hill and occurs in two strata. The upper has a trickness of 0.5 to 2 metrowhile the lower is much thinner and of little economic value.

Iron ore exploited by native methods is sent to Yuhsien (Hunan) for refining.

6) OTHER DEPOSITS OF LITTLE ECONOMIC VALUE: Siderite ore is said to be found in the anyuan coal field of F haiang. It occurs either in granular compact masses of 2-25 c in thickness or as nodules in the coal seams.

Limonite associated with psilomelane, chalcedony and some kaolin is known at Sanhoumiao about 5 km. S. of Finghsings

Similar Jeposits are said to be found also in the western part of China.

As already mentioned, it has been suggested to modernize and raise the daily production of the mines already working, and especially that at wuhsihshan, to cope with the demand of the diangsi from works when these are rehabilitated. This plan would require two sets of 100-ton coking furnaces and one smelting furnace of 100 tons' capacity. Coking coal would be obtained from F'inghisiang as well as coal from Fengch'eng. Other materials required for iron production, such as manganese and limestone, would be available from Chungpuchieh in Lop'ing and Feikung in Fengch'eng.

#### II. - Manganese ore.

The main producing districts are Tat'iehshanfong and Shiaot'iehshanfong at Chungpuchieh near Lop'ing in NE Riangsi Other producing districts of secondary importance are also found in western Riangsi, such as Paimao and Paichu in P'inghsiang and Eukang in Yunghsin.

A recent report 1) from the Kiangsi Bureau of Geole--gical Survey, reveals that the manganese ores of Loping consist
of psilomelane, pyrolusite, manganite and wad. It is estimated that
the reserves of the former three total 20,000 metric tons, whereas
the reserve of the last is said to reach 1,200,000 metric tons.

EDITOR'S NOTE: 1) Chin Yung Jih Pao, April 2, 1948'.

In Dec. 1920 mining was taken up by the Fu Lo Company and the ores were shipped to Japan. In 1925, the mine was placed under the management of the Kung Ho Company with a yearly production of some 10,000 tons. It was taken over by the Miangal authorities in 1928 but soon returned to private operation until its employee suspension (1930) on account of communist activities.

In 1941 the Department of Reconstruction of the Kiangs: Provincial Government set up an exploitation and refining plant in Loping. The ore obtained was partly used by the Kiangsi Iron Works while the rest was made into pulverized manganese. Although the magnetic selection process was employed in pulverization it was still below the standar; for making electric cells owing to its high ferruginous content.

The P'inghsiang ore is mainly found at Paimao which is 15 Kms. south of the haien capital and 12 Kms. northwest from T'ungt'ien on the southern bank of the Lu River which is navigable by junks from T'ungt'ien to the Haiangkiang in Hunan.

The mining area begins from Painao and stops at Ts'aochialing, with a total length of 5 kms. and a width of 2-3 kms. The formation belongs to the Yenchiling series emposed of yellowish green or reddish purple phyllite, sund shale and occasionally intercalated with thin layers of sandstone. It strikes NZ-5. dipping at an angle from 350-500 at the northwest. The reserve is said to be between 400,000 and 500,000 metric tons.

Outcrops, commonly found in this area, form irregular sodies of fissure fillings or nodules scattered in a brownish-red residual clay. The ore minerals are psilomelane and pyrolusite associated with limonite manganite, kaolin and wad. The ore concentrate is said to contain more than 47% of manganese.

#### III. - Tungsten & Associated Minerals.

Tungsten is widely distributed in S. Alangsi where the Tayu and the Lohsiao Ranges cross the provincial borders of Alangsi, Kwangtung and Hunan. The tungsten-bearing cres from the latter two provinces are of the same geological type as those obtained in Alangsi.

According to ar. Ting I of the Central Geologic.l Survey, the distribution of tungsten in Alangsi is mainly in the following regions:

Primitive methods are used in the production of tungsten in Alangsi because human labour is cheap and easily available. The use of machinery when introduced in the 3 leading mines of Haihuashan (Tayu), Aweimeishan (Luughan) and Tachinshan (Chiennan) proved to be more costly than han power. Ordinarily, the supply of labour is more abundant in the winter months as the farmers are not clonger working on their fields, and the regular miners, i.e. those who work constantly throughout the whole year, represent only 40, of the total labour supply. Consequently, the output of tungsten is highly seasonal; usually an increase begins to show from the tenth moon (October-November) and reaches its maximum in the first moon (February) of the following year.

The best producing district in the whole province is Tayu, with 37.67% of the total production; next is Yutu, 20.14% and the last is Hsingkuo, with only 0.04%. According to geologies, more than 300,000 metric tons of the total reserves have already been excavated in the gast 30 years.

## Table showing the production of Tungsten in Kiangsi (1918-1946; 1)

13.162 m.t.	1933	9,313 m.t.
	1934	8,900
9,141	1935	9,171
9.936	1936	7.895
10.505	1937	7,980
7.357	1935	9,102
8,025	1939	3,582
9,966	1940	6,573
9.066	1941	10,085
8.747	1942	10,015
8,750	1943	7,620
12,140	1944	2,897
0,377	1945	work suspended
5,299	1940	2,565
5,056	Total	232,015
	7,675 9,141 9,936 10,535 7,357 8,025 9,966 9,066 8,747 8,750 12,140 5,377 5,299	7,675 1934 9,141 1935 9,936 1936 10,535 1937 7,357 1935 8,025 1939 9,966 1940 9,066 1941 8,747 1942 8,750 1943 12,140 1944 0,377 1945 5,299 1940

According to the above table, the highest production took place in the years 1916 and 1929, 13,162 m.t. for the former and 12,146 m.t. for the latter. During World War I, the price of tungaten went up very high and the production was pushed up considerably to meet the Lemands. But production went down immediately in 1919 as the war was already over. It rose again gradually and reached a comparatively high figure in 1929, at the beginning of the world crisis. During the first years of the dinographanese war until the Pearl Hardour Incident, the export of tungaten was carried on through Hongkong.

(

In 1944, export became more difficult than ever. Two routes were still available but very expensive: one by land to USSR via the Northwestern Provinces and the other by air to the USA over the Hump. As each of these routes could only accomonate a very small quantity of exports, the production as well as the price of tungsten dropped drastically. In 1945, both production and collection by the government were suspended and did not regular until 1940. Exports also redeveloped gradually with Hengkong as the leading centre of distribution. Owing to the unreasonable price of official collection, smuggling has been very popular in the coastal provinces in South China.

EDITOR'S NOTE: 1) Tungsten in Kiangsi", Economic Development Quarterly, April, 1946.

MONTHLY BULLETIN NO.XXI - October 1943 - Study No.XXII - Page 9

After the var, exploitation of tungsten in Miangai became an enterprise of the Central Government until March 1948, when it became a Central and Local sovernment enterprise, following an accord of the National Resources Commission. The distribution of profits, as reported by the Sin sen Pao, My 19, 1948, is said to be 60% to the Central Government and 40% to the Miangai Previncial Government.

The conditions of production seem to have improved in 1947, some 5,000 tons being produced by the government and private mines. The government enterprises include Haihuashan, Hungshuichai and Pliaotiang in Tayu; Tachihashan in Chilennan; Aveimelashan in Lunghan; Huamelas in Haingkuo and Plankushan in anyuen. The private mines are exploited by miners in gruups of 5 or 10 after obtaining a linence from the Special minerals administration. Their products have to be sold to the administration at prices fixed by the latter.

Recent reports indicate that several deposits have been discovered in Stuth, East and West Mangel where exploitation is said to have already begun. The Kluchuhau mine in Manfeng in Eastern Mangel, discovered in 1947, produced tungsten as good at that of Helhuashan, the first and richest mine in the Province.

in Anfu, two masses of tungsten ores of very good quality were discovered at vukungshan. Preliminary prospecting undertaken by the mational mesources Commission in mestern managerestablished that these ore masses are 1-2 metres in width and tou-600 metres in length. Some 10,000 workers have been despatched by the Special Ennerals Administration to take up exploitation. In Hsingkus, S. Mangsi, a new site is also reported with rich deposits of tungsten ore.

Tin, besmuth and molybdenum are often found in conjunction with tungsten.

Tin is usually found in the upper part of the tungsten ores; sometimes the quantity of tin obtained is more than that of tungsten. Tin, is found mainly in the following districts: Tayu, Ch'ungi, Shangyu, Mank'ang and Lanhsien. Along the best known in this province are the tin mines of Hungshuichai, P'iaot'ang and Hsiat'ang in Tayu; P'anlungshan and Loyenshan in Tank'ang. Hsienaot'an and Lomushan in Ch'ungi and Changt'ient'ang in Shangyu. Cassiterite found in these districts is of good quality containing an average of 60.96 - 69.42 of pure tin. The annual output is about 1,000 tons, chiefly obtained from Tayu.

Bismuth, is mined in Tayu, Mank'ang, Ch'ungi, Shangyu Manhsien, Anyuen, Yutu, Huich'ang and Hsingkuo. The ores are 51;—muthite, bismuth, bismuthinte and native bismuth; but the major ty of the se found are bismuthite. The average content of bismuth is above 70%. The total production is said to be only 100 tons per year. Bismuth containing tungsten is produced mainly at Plankoushan in anyuen. The proportion obtained from this region is said to be one ton of bismuth from every 30 tons of tungsten ore.

The reserves of tin and bismuth in diangel are given as follows:

MONTHLY BULLETIK NO.XXI - October 1948 - Study No.XXII - Page 10

<u>Ti n</u>			<u> Bismuth</u>					
Tayu	122,800	metric	tons	Anyuen	2,700	metric	tons	
Ch'ungi	41,200	1)	.1	Shangyu	1,260	4	.•	
Nank ang	22,400	ii	d	Yutu	1,175	••	.•	
Shangyu	12,000	.i		Huich'ang	455	-•		
Kanhsien	0,000		ii .	Others	2,000		••	
Totals	204,400	metric	tons		7,600	metric	tons	

actybdenum is found in almost all the tungite: minus in Alangsi, but Tayu, Aank'ang and Aanhsien have the most there is very little record of the molybdenum of this province; the ore as sampled by Aanhsien is said to contain more than 50.3, of pure molybdenum. As to its quantity, some 0-7 metric tons are said to be mined annually.

#### IV. - Other Metallic Ores.

- 1. Placer gold is widely distributed in Mirngs:, especially in Loping, Nankiang and Asiushui. Despite repeated detailed explorations, no large placer sold mines have been discovered. In future, appropriate machinery should be employed for exploring the deposits in river seds. Ascording to the local factor, aarch 22, 1948; Kanchiuen, Ichiun, Loping, Asiushui and Juichin are important gold producing districts with a total reserve of 5,000,000 ounces.
- 2. Silver, Lead and Zinc: More than 20 district; are known to have been producing these minerals which hay be classified into the following groups: i/ galena containing silver, found at Yinshan in Tehsing, Yink'eng in Yutu and Lengshan in Shangkao, exploited in the past for silver. Lany of the mines have been abandoned to-day, and the economic value is unknown. ii/ lead and zinc ores containing no silver, found at Huangti in Anyuen. Preliminary exploration has shown that they would be worth exploiting.
- 3. Parite is produced at T'ungstan and Ts'ingliensha: in Linch'uan. There are five known zones, all in granite rocks and quartz of the Devonian Period. The longest outcrop of these zones is 500 metres while the widest is more than 3 metres. Containing few foreign elements, the deposit is around 1,279,800 metric tons an analysis of the sample shows the following:

Reduction	in	quanti ty	after	combustion	0.12,
$sio_2$					2.44%
$Fe_2O_3$					0.204
<b>n</b> 10					0.10,5
3 <b>a</b> 0					63.C4,
иgO					0.49,
803					33.59.

Since barite is widely used in chemical industries, mining should be taken up in Kiangsi.

LONIHLY BULLETIK NO.XXI - October 1948 - Study No.XXII - Page 11

#### Copper is found in the following districts:

i/ Lunghsia in Manhsien, producing native copper and chalcocite. The former is pure in quality but only a shall amount is available. No rich ores of chalcocite have been found.

ii/ Hsialung in Tayu, producing chalcopyrite which is found in the quartzite layer with tungsten. The reserve of pure copper is about 8,537 tons. At present, copper is a by-product of tungsten and tin ores.

iii/ Kuochiach'iao in Flengtse, priducing chalcocite, malachite and agurite which are found in the sanistones. They are good in quality but the amount of the reserves is unknown.

Supplementary Methods for the Investigation and Collection of the Income Tax on Profitseeking Enterprises in the Thirty-seventh Year of the Chinese Republic (1948)

Promulgated by the Ministry of Finance on the 21st of September 1948;

Published in the Ta Kung Pao (Shanghai), Sept. 26th 1948.

Annex No.: LXIII

Annexes concerned: Nos.L, LIII & LXI

Number of pages: 5

Remarks: Translated by our Legal Department.

GUPPLEMENTARY METHODS FOR THE INVESTIGATION AND COLLECTION OF THE INCOME TAX ON PROFIT-SEEKING ENTERPRISES IN THE THIRTY-SEVENCY YEAR OF THE CHINESE REPUBLIC (1948)

#### Article 1.

These Methods 1) are laid down in accordance with the provisions of Section I. Paragraph A. Item 4 of the "Supplementary Measures for the Readjustment of Finance" 2) promulgated by Presidential Decree on the twenty-sixth day of August in the thirty-seventh year (of the Chinese Republic).

#### Article 2.

From the thirty-seventh year (of the Chinese Republic), all profit-seeking enterprises, whether owned by the government or privately, shall settle their accounts and figure out their income amount separately for the first and the second half of each year. For the thirty-seventh year, they shall, before the end of September of the year and before the end of February of the following year respectively, submit a return on the amount of their income to the local competent collecting office, according to the form prescribed. according to the form prescribed.

#### Article 3.

The income tax on profit-seeking enterprises in the thirty-seventh year shall be divided into two parts: the First Part shall be the tax payable in the first half of this year,

EDITOR'S NOTES: 1) The former Methods for the Investigation and Collection of the Income Tax on Profit-seeking Enterprises in the Thirty-seventh Year of the Chinese Republic (cf. Monthly Bulletin No.XV - Feb. 1948 - Annex XLII) were abrogated by the Executive Yuan just before the promulgation of the new Supplementary Methods.

2) See wonthly Bulletin No.XX-Aug.-Sept.1948-AnnexLAI. MONTHLY BULLETIN NO.XXI - October 1948 - Annex Mo.IXIII - Page ?

which is assessed on the basis of the tax amount raid in the thirty-sixth year (1947); and the Second Part shall be the amount of tax levied according to the income derived from the operation of the profit-seeking enterprise in the first half of the thirty-seventh year, but shall be paid in the second half of the same year.

#### Article 4.

(

1

The first and record parts of the income tax on profit-seeking enterprises payable in the thirty-seventh year (of the Chinese Republic), shall be collected according to the following provisions:

- 1) If the first part of the tax has not been paid in full according to the amount assessed, a fine shall be imposed according to the law, and the deficit shall be paid.
- 2) When the return on income has been submitted within the time limit, the competent collecting office shall addit the accounts to wheek on the income amount reported, assess the second part of the tax and then issue a notification of the payment to be made within a prescribed time.
- 3) Where the return on income obtained during the first half of the year has not been submitted within the time limit, the competent collecting office shall assess the amount of tax payable according to the provisions of Articles 5 and 6 of these Methods.
- 4) Those who have paid the first part of the tax for the thirty-seventh year, and who also make full payment of the second part of the tax as assessed, within the time limit, shall be exempted from the auditing of their accounts as well as from paying any amount of tax still remaining due on the income of the thirty-sixth year after the estimated amount of tax on it had already been paid.
- 5) If accounts have been audited for the first part of the tax in the thirty-seventh year and the amount of tax deficient has already been paid, this supplementary amount may be credited towards the payment of the second part of the tax in the same year.
- 6) Taxpayers who are dissatisfied with the assessment of the first part of the tax for this year, but who have already made payment thereof within the prescribed time limit, shall, at latest before the end of September, apply to the local competent collecting office to reassess the tax amount after auditing the accounts, and to refund any amount paid in excess or order any deficit to be made up according to the law. But this shall apply only to those who possess complete sets of account books as prescribed in Articles 13 and 14 of the Income Tax Law 1).

#### Article 5.

In principle, the second part of the income tax payable by profit-seeking enterprises in the thirty-seventh year (of the Chinese Republic), shall be estimated according to the standard fixed for their respective types of business. The competent collecting office shall, after considering the nature of

EDITOR'S NOTE: 1) The Income Tax Law was revised and promulgated by the National Government on the 1st of April 1948 (see Monthly Bulletin Nos.XVII - April 1948 & XVIII - May 1948, Annexes L & LIII).

MONTHLY BULLETIN NO.XXI - October 1943 - Annex No.LXIII - Page 2

their business, classify in their appropriate categories all trades which have no guild organisation and firms which have not entered any guild.

All commercial and industrial guilds shall, before the sixteenth day of October, prepare a report setting forth the names and addresses of their members, the full names of the persons responsible, the amount of their half-yearly sales or the approximate amount of their half-yearly business receipts; in the case of banking or trust businesses or company organisations registered with the Hinistry of Economics; their actual amount of capital shall also be mentioned in the report. In addition, the guild shall prepare a register using a system of marks to indicate the business conditions of each taxpayer engaged in the type of business concerned. These reports and registers shall be submitted to the local competent collecting office to be rechecked.

The system of marks mentioned above shall be deeided upon by a meeting of Directors and Supervisors convened by the guild concerned.

If any guild fails to prepare and submit a register of the marks for its various members, the competent collecting office may make estimates based on either direct or indirect investigation, and on consideration of the nature of the enterprise or the conditions of businesses of similar type.

#### Article 6.

The competent collecting office, on the basis of the above reports and registers submitted by the guilds, and also according to the various data it has itself collected, shall estimate the amount of noome received by the taxpayers from each type of business during the first half of the thirty-seventh year (of the Chinese Republic) and assess the amount payable as the second part of the tax for the thirty-seventh year.

(The various data to be collected by the competent collecting office:-)

- l) Relation between the prices of the principal goods of each kind of business in January of the thirty-seventh year, which is taken as the basic period, and the times of their increase during the half year;
- 2) Date concerning imports and exports published by the Customs House and import-export control organs;
- 3) Official and non-official statistics and data concerning the conditions of the operation of various businesses, compiled by institutes of economic research and information services;
- 4) Data concerning the production and sales of various goods subject to the commodity tax;
- 5) Opinions concerning general business conditions and commodity prices, expressed by scholars, experts and persons playing a leading role in industrial and commercial circles.

#### Article 7.

Taxpayers shall, within fifteen days after receiving the Notice of Payment, pay in full the amount of tax assessed by the competent collecting office in accordance with the methods

MONTHLY BULLETIN NO.XXI - October 1948 - Annex No.LXIII - Page 3

Approved For Release 2001/09/04 : CIA-RDP80-00926A006900050003-0

٤.

provided in the preceding Article. Any failure to make the payment within the time limit shall be punished in conformity with article 156 of the Income Tax Law.

Article 8.

The amount of tax assessed by the competent collecting office according to Articles 5 and 6 of these Methods, shall be regarded as equivalent to the amount of tax payable assessed after investigation as provided in the Income Tax Law.

If a taxpayer is not satisfied with the above . assessment of the amount of tax payable, he shall after making full payment of the assessed amount of tax and within twenty days after the expiration of time limit for tax payment, file a written application to the local competent collecting office, requesting a re-investigation of the case. No such request shall be accepted if the tax has not yet been paid in full or if the application is not made within the given time limit.

Article 9.

In the case of public enterprises undertaken by Government institutions, profit-seeking enterprises jointly operated by the Government and private interests and companies which have not joined their guild, the assessment of the second part of the income tax on profit-seeking enterprises for which they are liable in the thirty-seventh year (of the Chinese Republic), shall still be based on the auditing of their accounts.

Article 10.

Where the tax amount to be paid by a particular type of business cannot be assessed as provided in Article 6 of these Methods, application may be made to the competent collecting office to approve an investigation by random sampling of the account books of not less than five per cent of the commercial firms engaged in the business concerned, the results of this investigation to be taken as reference for determining the standard amount of sales (amount of revenue 1) 2), the standard rate of expenses to sales (rate of expenses to revenue) 2), and the standard rate of net profit on sales (net profit) 2); the data found in the guild members register mentioned above are also to be considered when fixing the , standard for assessing the tax,

#### Article 11.

The investigation by random sampling, of the account books of the commercial firms engaged in each type of business, shall be decided by lot. Those firms on which the lots have fallen, shall, within a given time limit, bring all their accounting books, certificates and report forms to the competent collecting office for auditing and for the tax to be assessed. If any such firm fails to submit its accounts for auditing within the prescribed time, the amount of its income as well as that of its tax payable time, the amount of its income as well as that of its tax payable

MONTHLY BULLETIN NO.XXI - October 1948 - Annex No.LXIII - Page 4

EDITOR'S NOTES: 1) For convenience of distinction we have used the word income whenever the reference is to the taxable income (in Chinese: So Te), and the word revenue in a more general sense to include any type of income (in Chinese: Shou I).

<sup>2)</sup> Actually so bracketed in the original text of the Methods.

shall be directly determined and the case sent up for punishment; another firm shall be chosen by drawing lots.

Where the firms of a particular type of business keep no account books or their account books and certificates are either incomplete or inadequate so that no investigation by random sampling is practicable, the various standard rates or ratios for computing the tax shall be worked out by considering the operating conditions of the business concerned during the first half of this year and by referring to businesses of similar type.

The standard for assessing the tax on any accessory business undertaken by a profit-seeking enterprise may be worked out by taking into consideration the operating conditions of that accessory business during the first half of this year and also by referring to those of the principal business.

Article 12. These Methods shall come into force on the day of promulgation.

  duchang, Shashih, Ichang (Hupeh); Neikiang, Ipin;
  duchang, Shashih, Ichang (Hupeh); Neikiang, Ipin;
  danhsien, Luhsien, Loshan, Tzukung 2) (Szechwan),
  aweiyang (dweichow); Tsinan (Shantung); daifena,
  Chengohow (Honan); Taiyuan (Shantung); daifena,
  and Paoki (Shensi).

  4) 9100,000 for Stock Companies Limited and other Limmited Companies and \$50,000 for Unlimited Companies,
  Unlimited Companies with Limited Liability and Joint
- Unlimited Companies with Limited Liability and Joint Stock Companies, in all other places throughout the ecuntry, (i.e.) apart from the municipalities and districts already listed under items 1, 2 and 3.
- II. The minimum amount of capital for native banks shall be one half of the abandary prescribed in the preceding paragraphe.
- EDITOR'S NOTES: 1) The Chinese term for Private Banks is "Shang Ying Yin Hang", literally meaning: Banks operated by Merchants, as distinguished from Government, provincial and municipal banks.
- 2) Including Touliutsing and Kungtsing. MONTHLY BULLSTIR NO. XI - October 194 - Annex No. LXIV - Page 2

III. If a conmercial, industrial or native bank setatlishes a trust or savingo department it shall increese its standard c pital amount as provided above by one half for e ch department as exented. If branch or sub-branch banks or offices are erected in a different municipality or district, an increase of the capital by the tenth shall be made for each of them; but if the general managing office or the general bank is located in a region where a see live amount of capital is prescribed while the branch is established in a region where a larger amount of capital is required, the increase shall be one tenth of the capital amount required in the locality of the branch.

#### artiole 4.

when readjusting their capital according to there Regulations banks may revaluate their iwn assets and use any appreciation in the value to make up any deficiency. The whole of this approciated value shall be converted into capital and Sivided among the sharehilders in the same ratio as the original capital. It shall not be distributed in cash.

The total amount of the appreciated value of the assets mentioned above shall not exceed fifty per cent of the total amount of capital increase required. The remaining amount of the increase shall be paid in cash by the riginal shareholders proportionally. If any of them are not willing to make such additional payment, the provisions of the Company Law 1) shall be applied.

After the increase of capital has been effected, that part of the increased amount which is in cash shall be degresited for three menths with the Central Bank or a bank commissional by it. It may be used for any proper purpose, with permission from the competent office under the sinistry of Finance. The Regulations governing this shall be separately laid down by the sinistry of Finance.

If any falsification has been made concerning the cash part of the increased capital, as mentioned in the proceeding paragraph, the limistry of Finance shall, after investigation of the case, cancel the business licence of the bank in question.

#### article o.

C

Banks shall not revaluate other assets than the ones cited below; and the revaluation shall be effected in comfortity with the following standards:

- 1) Securities shall not be counted at more than seventy per cent of their current value.
- 2) The revaluation of investments in productive enterprises shall also be made as provided in the proceeding item. But, after their value has appreciated, the amount invested in each company
- EDITOR'S NOTES: 1) The Company Law was promulgated by the Nati:nal G:vernment on the 12th of april 1946.
  - 2) These Regulations were promulgated on the 6th of Oct ber 1948. See Annex No. LXVII.

MONTHLY BULLETIN NO. XXI - October 1940 - Annex No. LXIV - Page 3

and the total investments of the bank shall not surpass the abounts provided in Articles 53, 63 and 74 of the Banking Law. 1)
3) House and land used in ousiness:

The value of houses purchased or constructed before the end of the twenty-sixth year of the Chinese mopublic (1937) shall be the balance of their original purchasing price or seet of construction after deducting for depreciation.

If the houses were purchased or constructed in or after the twenty-neventh year of the Chinese Republic (1938), their value shall first be computed in terms of Papi according s the formula below and then converted into Gold Yuan:

(Original purchasing price or post of com-

struction - depresention) X index number of

wholesale commodity prices throughout the commodity prices throughout the commodity

for the year of purchase or construction

EDITOR'S NOTE: 1) The Canking Law was primulated by the State Council in August 29th 1947 (of, Anthly Bulletin No.VIII - May 1947 - Annex XV and Monthly Bulletin No.IA - June 1947 - Annex XX).

The texts of the 3 articles mentioned run as follows:

Particle 53. If a commercial bank purchases certificates of shares of limited liability of certificates if shares if limited limitity of companies for productive enterprises, public utilities or communications, the purchasing value of the share certificates of each company shall not exceed two per cent of the total amount of the deposits, and the aggregate purchasing value shall not surpass twenty per cent of the total amount of the deposits."

[Marticle p3] [If an industrial bank purchases

Marticle o3. If an industrial bank purchases cortificates of shares of limited liability of companies for agricultural, industrial, mining of other productive enterprises, public utilities or communications, the purchasing value of the phare certificates of each company shall not described four per cent of the total amount of the deposits, and the aggregate purchasing value shall not surpage forty per cent of the total amount of the deposits.

"article 74. Particle 74. If a savings bank purchases certificates of shares of limited liability of companies for agricultural, industrial, mining or other productive enterprises, public utilities or communications, the purchasing value of the share certificates of each company shall not exceed two per cent of the total amount of the deposit, and the aggregate purchasing value shall not exceed twenty-five per cent of the total

amount of the deposits."

c. The revoluation of land shall be based on the value as estimated by the land administration of the place where it is located.
4) Furniture used in business shall be dealt with according to the provisions concerning houses under the preceding item.

article 7.

When banks readjust their capital in conformity with those Regulations, the appreciated value of their assets need n t be counted arong profit and loss items

article 8.

When banks readjust their capital in conformity with these Regulations, the Supervisors' Committee or, in unlikited companies the shareholders in charge of business operations, shall draw up a detailed plan, present it to the Shareholders' meeting for a resolution to be passed according to the law on the readjustment of capital and submit it to the ministry of Finance for approval. The registration shall then be charged accordingly.

article 9.

any bank which is unable to readjust its contain nonformity with these Regulations, may merge with several others and effect a reorganisation. But the number of orange and sub-branch offices after the re-organisation shall not exceed the maximum number of offices of any one of the banks before the re-organisation.

article 10.

If any bank fails to increase its capital within the given time limit to the amount prescribed by these Re ulations, the ministry of Finance shall order it to cease operation and to liquidate within a given period, and shall also cancel its oussessor registration.

Article 11.

These Regulations shall come into force on the . day of promulgation.

#### APPENDIX

OH SEVLAAL IMPONITAT POINTE CONSTRAINE THE INCREMENT OF CAPITAL OF AUNDING BANAS

According to the Chin Yung Jih Pao (Shanghai; of October 6th 1918, the Financial Control Burgan in Shanghai has recently received the following instruction from the sinistruction of Foreign Banks:

MONTHLY BULLLETIA KO.XXI - October 194. - Annex No.LXIV - ILEC !

"In view of the fact that none of the head offices of fereign banks in China are located in this country, the provision conserning the minimum capital actually said up for private banks, in article 3 of the Regulations Governing the Readjustment of the Cepital of Private Banks, shall apply to the foreign banks according to the standard prescribed for the place where their representative bank, as originally recognised by the simistry of Manace, is leasted.

"If branches or sub-branches have been erect. in different municipalities or districts, an additional increase of the capital by one tenth shall be necessary for each of them.

"Forcign banks may, however, be exempted from convening a Sharcholders' Meeting for discussing the increase of capital as laid down in article 2 of the Procedure for the fire adjustment of the Capital of Private Banks. But, an application such an exemption must be filed by the representative, the manager of the representative bank in China or the agent designate, by the principal bank, in virtue of article 355 of the Company Law.

"all other provisions shall apply to foreign bloks;

Explanation of the "megulations Governing the Readjustment of the Capital of Private Eacks".

Produlgated by the dinistry of Pinance on the 12th of October 1948;

Published in the Shen Pau (Shanghai), Ooteber 13th, 1948.

Annex do.: LAV

Annex concerned No LAIV

Number of pages: 5

Remarks: Translated by our Legal Department.

EARLANDATION OF THE "REGULATIONS OF OF THE CARLES OF THE CAPITAL OF PAINTEE SAMES"

Article 1 & 2. No explanation.

### article 3. Explanation :

- 1) The minimum amount of capital prescribed for modern and native banks in each place shall apply to all banks throughout the same district, whether they are located inside the district city or in a village or market-town.
- 2) If a banking department has been established by a trust company, the amount of the latter's capital shall be governed by the same provision as for that of a bank in which a trust department has been set up.
- 5) If more than one branch or sub-branches has been established within the same municipality or district, no increase of the capital by one tenth shall be necessary for the extra branches or sub-branches.
- 4) If the operating capital of the trust or savings department of a branch or sub-branch bank, has been appropriated from the trust or savings department of the principal bank, then no increase of capital shall be necessary.

#### article 4. Explanation :

1) If improvements, reconstruction or repairs have increased the original value or efficiency of assets the price paid for which was originally entered under the items of furniture for business use or houses and land for business use; a revaluation may be made and items of this kind may be combined and set down under

LONTHLY BULLETIN NO. XXI ,- October 1940 - .nnex No. LXV - Fi.ge 1

the heading of approciated assets. But it shall not be so set down if it has alreely been entered under profit and loss.

2) If after the assets have been appreciated there is a surplus over and above half the amount by which the capital is to be increased, it may be used as reserve but may n t be distributed.

#### Article 5, Explanation :

- 1) The "total amount of capital increase required", as gentioned in this article, means the new amount of capital fixed by a resolution of the Shareholders' aceting, which may exceed, but shall not be less than, the prescribed standard. If the Shareholders' Eceting ! has decided to increase the capital only to the minimum standard, the "total amount of capital increase required" will refer to this minimum. If the Shareholders' Eceting has taken a resolution to increase the capital to more than the prescribed standard, then the reference will be to the amount of capital increase fixed by the resolution. For instance, the shareholders have determined to raise the capital to GY-92,000,000:
  - a. If the value of the original assets have been increased to GY.1,000,000, the shareholders shall still pay GY\$1,000,000 in each.
     b. If the original assets have been revaluated at
  - b. If the original assets have been revaluated at GY<sub>2</sub>300,000, the shareholders shall make a supplementary payment in cash of GY<sub>2</sub>1,700,000.
  - c. If the value of the original assets have been increased to GY<sub>4</sub>1,200,00°, the shareholders will still have to pay GY<sub>2</sub>1,000,00° in cash. The amount of GY<sub>2</sub>200,000 in excess shall be set aside as reserve, but cannot be distributed.
- The shareholders shall not substitute properties for cash in paying their shares in the increased capital.
- 3) Each motern or native bank shall deposit with the dentral Bank, the cash part of its newly increased capital; at the end of three months the maney shall be refunded. In places where no Central Bank has been created, the deposits of cash shall be managed by the ministry, in consultation with the Central Bank.
- 4) If the appreciated value of the assets has not reached one half of the amount of capital increase required, cash to the amount of the part deficient shall also be deposited with the Central Bank.
- 5) If the readjusted capital of a modern or native bank exceeds the standard amount of capital and the part in excess also corresponds to the amount of capital increase required for the establishment of branches or sub-branches, no further increase of capital will be necessary in the future when erecting branches or sub-branches up to the given extent, after approval has been secured according to the regulations.

MONTHLY BULLETIN MC.XXI - October 134 - Annex No.LXY - Page 2

#### Article o. Explanation :

- 1) The four kinds of "assets of a bank which can be revaluated" as mentioned in this writele, refer to those owned by the bank itself, as a legal entity, and not to those owned individually by the shareholders. They must further have been among those listed on the statement of assets and liabilities on the 19th of August of the 37th year (1948); no assets added to the statement after that date can be subject to revaluation.
- 2) Among the four kinds of assets whose value can be reestimated by a trust company or the trust department of a bank, trust assets shall be limited to those only which are owned by the Legal entity itself.
- 3) Except where the Government has fixed a rate of conversion into Gold Yuan which must be taken as a haste of valuation, securities and investments in productive enterprises shall be evaluated on their current price, which shall be taken as the latest price on the open market on Aug. 19th.
- 4) When the valuation of securities of investments in productive enterprises is reported, it shall be checked up with the daily trial balance for the day the investment was made.
- 5) The "securities" mentioned in this article include company debentures, Government bonds and Treasury Notes. If these securities have no fixed price or open market price, their current value shall be computed according to the following formula:

Current value in terms of Gold Yuan = Original purchasing price X

index number of wholesale commodity prices throughout index number of wholesale commodity prices throughout

the country for the 1st half of August of the 37th
the country for the year of

## <u>year (1948)</u> X <u>1</u> purchase X 3,000,000

- 6) The expression "investments in productive enterprises", as used in this article, refers to company shares. Again, the provision "after the value of the investments in productive enterprises has appreciated, the amount in each company and the total amount of investments of the banks shall not surpass the amounts provided in articles 53, 63 and 74 of the Banking Law" means that the Bank may not exceed these provisions either when buying iN or when readjusting its capital. If the share certificates representing the investments have no current value, this shall be computed according to the method for calculating the current value of securities as provided in paragraph 5; above.
- 7) When reporting increase of the value of houses or land holdings, the area, location, construction materials and number of storeys shall be clearly stated; to facilitate inspection this report together with the

MONTHLY BULLETIE NO.XXI - October 1948 - Annex Ro.LXV - Page &

original contract or other cogent evidence of purchase and the account books shall be submitted to the local Central Bank or a bank commissioned by it. In case of necessity, an order may be issued for the same documents to be sent to the sinistry of Finance for examination.

8) If no other appropriate method has been adopted for computing depreciation of houses or furniture used ir business, the following formula may be used:

Annual depreciation = Original value - residual value years of use

9) If suitable standards exist, the years of duration of houses & furniture shall be based on the following table;

Kind (of assets)	Structure.	Years of duration	
Buildings	Construction with steel or iron framework Construction with re- inforced concrete	50 3	/ears
	framework	40	u
	Heavy construction with brick or stone wall Heavy construction with	20	и
	wooden logs	10	<b>11</b>
	Heavy construction with earth wall	5	4
Furni ture	wade of iron	20	Ħ
	Made of wood	5	ü

- 10) If the years of duration for any house or furniture have expired, and according to the depreciation there remains a residual value to be estimated, this estimated value shall not exceed 1/20th of the original value.
- 11) If the local land administration has not estimated the value of a land holding, its valuation shall be made, according to the method for evaluating securities as provided in paragraph 5) above.

#### Article 7. Explanation :

€.

See explanation in Paragraph 2) under Article 4.

#### Article S. Explanation :

- l) When private banks readjust their capital, they may reduce the number of their original departments such as savings or trust departments and branch or subbranch banks or offices; but they shall not add to them.
- 2) While modern or native banks are readjusting their capital, their original principal banks, general managing offices and the branches or sub-branches which are to be maintained, shall not change their location.

MONTHLY BULLETIN NO. XXI - October 1948 - Annex No. LXV - Page 4

- 3) While readjusting capital, no movern or native build shall change its organisation from a limited company or stock company limited to an unlimited company, unlimited company with limited liability or joint stock company. But an unlimited company, unlimited company with limited liability or joint stock company is allowed to be reorganised as a limited company or stock company limited.
- 4) When readjusting its capital, a bank whose original name was "Yin Hao" ) shall change it into "Ch'ien Chuang" ). If the capital of a native bank complies with the standard for a modern bank, its title may be changed into "Yin Hang" (modern bank). But no modern bank can name itself "Ch'ien Chuang" (native bank). Trust companies may also be reorganised into modern banks, but shall not be changed into native banks.

#### article 9. Explanation :

- 1) when two or more modern or native banks merge and reorganise, the name of the newly reorganised modern or native bank shall be the original name of one of the banks: the number of branch or sub-branch banks of offices of the new bank shall be restricted to the original number of branches and sub-branches of this bank. But they may be located in any of the places where branches or sub-branches of the original banks existed before the merger.
- 2) When a "modern bank" and a "native bank" merge they may become either a "modern bank" or a "native bank"; when a "native bank" and a "trust company" merge, they may become a "modern bank", a "trust company", or a "native bank"; when a "trust company and a "modern bank" merge they may become either a "modern bank" or a "trust company". But if a "modern bank", and a "native bank", or a "trust company" and a "native bank", are to become a "native bank" after their mereger, none of the original branches or sub-branches of the "modern bank" or "trust company" shall continue to exist.

Articles 10 and 11. No explanation.

C

(End)

EDITOR'S NOTES: 1) Literally "Silver Shop".

 Literally "Money Shop", a term officially adopted for Native Banks.

## ORDER OF PROCEDURE FOR THE READJUSTMENT OF THE CAPITAL OF PRIVATE BANKS

- Each modern or native bank shall complete the process of readjustment of its capital within two months beginning from the
  sixth day of September of the thirty-seventh year (1948), i.e.
  the day of promulgation by the Government of the "Regulations
  governing the Readjustment of the Capital of Private Banks").
- 2, Each modern or native bank shall convene a Shareholders' Meeting to discuss methods for the increase of its capital, in conformity with the provisions of articles 41, 114, 240, 247, 251, 253, 255 and 256 and other articles relevant to the increase of capital, in the Company Law. The valuation of their original assets shall be carried out in accordance with the Regulations governing the Readjustment of Capital.
- 3. If the original amount of capital of a modern or native bank has already been examined according to provision, it may be converted into Gold Yuan and regarded as a part of the readjusted capital without being subject to a new examination.
- 4. The Shareholders' Meeting, after passing the methods for the increase of capital, shall at once call in a sufficient new increase of capital, and fill in for submission five copies of the "Report Form for the Increase of Capital of Private Banks" (model form appended below). Two copies, together with the documents and fees to be prepared when increasing capital, are to be submitted for consideration by the Ministry of Finance, two copies, together with the cash part of the capital increase, shall be sent to the local Central Bank, or a bank commissioned by it, for examination and the remaining copy shall be filed by the bank itself.

EDITOR'S NOTE: 1) for their translation, see Annex LXIV.

MONTHLY BULLETIN NO.XXI - October 1948 - Annex No.LXVI - Page 1

- 5. If, after receiving the report form mentioned in the last irigraph, the ministry of sinance finds that the report corresponds to the provisions, it shall send one of the original copies of the report form to the local Central Bank or the bank commissioned by it, requesting it to the k up whether the amount of capital is correct, to examine whether each item of the asset: is actually owned and to test if the valuation is accurate.
- The local Central Bank or a bank commissioned by it, having verified the actual facts of the assets and capital to be correct and free from any intent to deceive, after the modern or native bank which made the original application has issued an undertaking (model form appended below), shall at once issue a certificate of the examination of capital. It shall also send one copy of the original report form, countersigned and stamped by the chief examining officials, together with the undertaking and a statement of assets and liabilities, to be dealt with by the ministry. After three full months have elapsed the cash deposited as increase of capital shall be returned to the modern or native bank which originally deposited
- 7. When the ministry of Finance has received from the Central ink, or a bank commissioned by it, the report form and other papers on the examination of capital and has found them to be correct, it shall permit the change of registration to be made.

Mineral Product Tax Regulations Promulgated by the Rational Government on the 5th cf February 1947;

Annex No.LXVIII

Number of pages: 4

Published in the Weekly Review of Laws (Fa Ling Chou K'an), řeb. 5th, 1947.

Remarks: Translated by our Legal Department.

#### SHOULD PRODUCT TAN REGULATIONS

# article 1.

(

1

Except where it is otherwise provided, a mineral product tax shall be levied according to these Regulations on all minerals produced in this country, including those consumed by public utilities or for military use.

The mineral product tax is a State Tax and shall be collected by the commodity tax offices under the Bureau of Tax tion (Shui Wu Shu) of the Ministry of Finance.

#### Article 3.

Only those mineral products which are enumerated in Article 2 of the Mining Law, 1 2 shall be subject to the mineral -----

EDITOR'S NOTES: 1) The Mining Law was first promulgated on May 20th 1930, and was successively revised on Jan. 25r4 1932, Oct. 15th 1937, July 22nd 1938, June 3th. 1942 and April 30th 1947.

> 2) The Minerals mentioned in Article 2 of the Mining Law are Gold, Silver, Copper, fron, Ti-Lead, Antimony, Mickel, Cobalt, Zinc, Aluminiu, Mercury, Bismuth, Molybdenum, Platinum, Chron-ium, Uranium, Radium, Tungsten, Anganese, Vanadium, Potassium, Iridium, Sulphur, Phosphorus, Arsenic, Rock Crystal, Asbestos, Aica, Argenum, Halite, Alum, Diamond, Sal Soda, Bariten, Nitrates, Berax, Graphite, Kallaite, Fluorspar, Fire Clay, Talc, Feldspar, Kaolin; Marble - including Calcite; Periclasite - including Delomite; Coals, Mineral Oils, Gases, Precious Stones - including Jade; Sands for Grinding.
> Mineral Colouring Matter and others design ted
> by the National Government (cf. "Compilation of Laws of the Republic of China", by the Legis-lative Yuan, 1941, P.3482).

an ordinance issued by the National Govern-ment on April 17th 1948, added the 4 following minerals: Thorium, Titanium, Zirconium and Strontium (cf. Central Bank deckly, April 28th 1948).

MONTHLY BULLETIN GO.XXI - October 1948 - Annex No. LXVIII - Page 1

product tax. But the ministry of Finance may according to the ditions of production and marketing decide upon the different dates for the levy.

Merchants engaged in producing or processing the minerals mentioned above shall register with the respective con-ctent commodity tax office. No registration shall be granted to any person who fails to submit for examination, the Permit for mining exploitation issued by the Einistry of Economics.

#### Article 4.

The different classes of mineral products and their rates of taxation shall be as follows.

Class I. Three per cent ad valorem on from, Coal, was and winered 011:

Class II. Five per cent ad valorem on dypsum, Falc, Alum, Arclin. Fire Clay, Sal Soda, Copper and Tin.

Class III. Ten per cent ad valorem on all other kinds of miner 1 products.

#### Article 5.

The taxable value of a mineral product shall be computed on the basis of its average wholesale price over three months on the markets near the producing region. But the minis ry of Finance may make an appropriate adjustment whenever the cotal wholesale price on the market becomes higher or lower by one fount: than the average wholesale price on which the taxable value is base'.

The above-mentioned average wholesale price covers.

- (a) The taxable value of the mineral product,
  (b) The original mineral product tax to be paid, i.e. the amount payable at the tax rate applied to the taxable
- (c) The expenses for transporting from the producing region to a nearby market; always fixed at ten per cent of the taxable value.

The formula for computing the taxable value is as follows; 1) 2)

- . 2 EDITOR'S NOTES: 1) The formula as given in both the leekly Review of Laws of Feb. 5, 1947 and the Financial Jeckly of Feb. 19, 1947 runs as follows: "The assessed taxable value = everage wholesale price on markets hear the producing region X 100, divided by (100 + tax rate on the commodity con-nerned + expenses for transporting from the producing region to a nearby market, i.e. 10 or 5) But, judging from the terms of the second paragraph of the same article, it is evident that or 5" is a printer's error and should be omitted.
  - 2) according to the Supplementary deasures for the Readjustment of Finance promulgated by Presidential Decree on the 20th of August 1948, in collecting the mineral product tax, the taxable value shall always be the balance of the wholesale price on the markets on the 19th of august 1948 after deducting the actual amount of tax for the period in question. (cf. monthly Bulletin No.XX - Aug.-Sept.1948 - Annex No.LXI. p.2)

MONTHLY BULLETIN NO.XXI - October 1948 - Annex No.XXVIII - F.ge 2

The assessed taxable value = average wholesals price on markets near the producing region X 100, divided by (100 + tax rate on the commodity concerned + expenses for transporting from the producing region to a nearby market, i.e. 10)

In order to facilitate the levying of the tax, the taxable values of the various mineral products may be assessed according to a graded system.

Article 6.

The examination of the selling prices of each kind of mineral product, the compilation of the index number for commodities and the estimation of taxable values shall be carried out by the appraisal Committee under the Bureau of Taxation; the method shall be laid down by the ministry of Finance.

article 7.

When any mineral product for which the mineral product tax has already been paid, is transported and sold in other provinces, no local government is allowed to levy any further tax thereon.

article 6.

The Commodity Tax Bureau of each region shall station officials in mines, factories and depots to collect the mineral product tax. In special circumstances, the collecting officials may be directly appointed by the Bureau of Taxation. If in practice it is inconvenient to station officials in a mine, factory or depot, the/commodity tax office may, after investigation, determine the average amount of production and collect the tax each month; or the merchant shall, when transporting, apply to the first commodity tax office which he reaches in his way, for the tax to be collected according to the law.

article 9.

When the mineral product tax has been collected, a taxation receipt shall immediately be filled in and issued. If (the mineral products) are contained in a package, a stamped Permit, adapted to the type of packing used, is also to be affixed.

article 10.

orocessing or refining minerals or in marketing or transporting them, commits one of the following offences, a fa Huan 1) fine not exceeding five thousand dollars shall be imposed.

1) The transport and sale of mineral products without an accompanying taxation receipt even though the mineral product tax

has already been paid and the receipt secured;

2) The transport and sale of mineral products on which the mineral product tax has already been paid, without reporting for inspection when they are moved or removed or on arrival at their destination;

3) The transport and sale of mineral products on which the \_c mineral product tax has already been paid, without applying for a permit for break of bulk when breaking bulk or changing destination;

EDITOR'S NOTE: 1) The term Fa Huan is used for a fine of a civil character under civil law, or of a fiscal character, imposed for breaches of taxation laws; in both cases it is imposed for offences which do not come under the penalties of the criminal law.

MONTHLY BULLSTIN NO.XXI - October 1946 - Annex No.LXVIII - Page 5

- 4) The sale during transit of mineral products on which the maneral product tax has already been paid, without applying to the local commedity tax office for permission;
- 5) Refusel to accept inspection by the commodity tax office of mineral products for which the mineral products tex  $h_{\rm LS}$  already been paid;
- 6) Failure to register as prescribed,

#### article 11.

If any merchant engaged in exploiting mines, in Trocessing or refining minerals or in marketing or transporting them, commits one of the following offences, a Fa Huan fine shill be imposed, of not less than twice but not more than ten times the amount of tax evaded.

1) The transport and sale of mineral products on which the

- mineral product tax has not yet been paid:
  2) any attempt to evide taxation by use of a certificate which
- does not cover the mineral products concerned, 3) any attempt to evode texation by transporting and selling mineral products with a taxation receipt or permit for by k of bulk which has been fraudulently altered,
- 4) any attempt to evale taxation by transporting and selling mineral products with a used taxation receipt or a use. ....it for break of bulk, which has been frauduloutly altered,
- 5) any evasion of tax by declaring high-prices mineral products at a low price;
- 6) any evasion of tax by mixing mineral products of high price with those of low price or with goods of other kinus.

#### Article 12.

<del>(</del> ,

•

If any merchant engaged in exploiting times, in processing or refining minerals or in marketing or transporting them, commits one of the following offences, besides the infliction of a Fa Huan fine according to article 11, the mineral products shall also be confiscated. Contraventions of the criminal law shall be punished according to that law:

- 1) Repeated commission of any of the offences enumerated in the various items of article 11; evasion of a tax amounting to more than five thousand dollars, or forcible resistance with intent to escape when discovered and arrested;
- Forging a taxation receipt or permit for break of bulk, a resident tax-collector's chop or the seal of the commodity tax office; or evading taxation by using a forsed receipt, permit or seal.

If a mineral product which ought to be confiscated according to any item of the preceding paragraph, has already been sold, its price shall be handed over.

#### article 13.

The Fa Huan fines and confiscation provided for in the preceding three articles shall be enforced by court ruling,

an appeal may be filed within five days after service of the above-mentioned ruling. But no further appeal shall be made. Article 14.

The finistry of Finance shall sugather with the ministry of Economics, lay down rules governing the collecting new gistration and inspection for the mineral product tax, and shall submit them to the Executive Yuan for confirmation.

#### article 15.

These regulations shall come into force on the date of promulgation.

Rules governing the Collection of the lineral Product Tax

Promulgated jointly by the ministry of Industry and Commerce and the Ministry of Finance on the 9th of July 1948;

Fublished in the Weekly Review of Laws (Fa Ling Chou K'an), August 11, 1948.

annex No.: LXIX

annex Concerned: No. 22 Vall

Humber of pages: 5

Remarks: Translated by our Legal Department

RULES GOVERNING THE COLLECTION OF THE "IMERAL PRODUCT TAX

These Rules are laid down in conformity with the privisions of article 14 of , the Mineral Product Tax Regulations 1).

Article 2.

1

Except where it is otherwise provided by laws or ordinances, all matters relating to the collection of the mineral product tax, or registration and inspection therefor shall be governed by these hules.

article 3.

merchants engaged in exploiting mines, in processing er refining, or in trading in or transporting minerals - hereafter mentioned as "merchants" - shall pay the mineral product tax according to the amount of tax per unit as published.

merchants engaged in producing or processing minerals shall every day fill in prescribed forms with the quantities of goods produced, processed, transported, sold and/or kept in stool, and shall then every ten days submit a report thereon to the local competent commodity tax office or to the tax officials stationed in the mine, factory or adopt who shall resistant office about the mine. in the mine, factory or depot, who shall register after checking up.

The merchants shall assume the responsibility of filling in the above-mentioned forms and reports with true and correct figures. Shenever necessary, the commodity tax office or the tax officials stationed in the mine, factory or depot, may investigate and count the goods in stock, and check up with the account books, the merchants not being allowed to reject their authority.

MDITOR'S NOTE: 1) The Mineral Product Tax Regulations were productgated by the National Government on the 5th of February 1947; for its full translation, see Annex No.LXVIII in this Bulletin.

MONTHLY BULLETIN NO.XXI - October 194. - Annex No LAIX - P.ge 1

where a small mine produces only small and irregular quantities (of minerals; which are sold only in the same locality, the commodity tax office shall investigate and determine its average output and order it to pay the mineral product fax every menth. In an iron mine, the tax shall be livied when the iron leaves the furnace, whereas on all other mineral products, the tax shall be levied when they are transported. The procedure for payment and collection shall be as follows:

- 1) Where the commodity tax office stations tax collectors in the mine, factory or depot, or the merchant is to apply to the local commodity tax office for collecting the tax, the merchant shall, when the iron is taken out from the furnice or other minerals are being transported, first fill in an application for Tax Payment and submit it to the local commodity tax office or the tax officials stationed in the mine, factory or depot who shall, after verification, issue a motice of rayment. The merchant shall then make payment to the Treasury in accordance with the Public Treasury Law and present the receipt to the original office issuing the motice of Payment, which shall release a Taxation necessary, where the affixing of a Stamped Permit is required by the Bureau of Taxation, (the tax collectors; shall further see that a permit form is affixed on the wrapping of the package bearing the office's stamp with the date also indicated. Then the minerals are allowed to be transported and sold.
- 2) where the average amount of production is determined after investigation, by the commodity tax office and the tax to be paid monthly, the merchant shall compute the amount of tax payable at the current tax rate and according to the (afore-said) average amount of production, and, filling in an application for Tax Payment at the end of each month, apply to the local commodity tax office for a Motice of Payment to be issued after vertification. The merchant shall then make the payment to the Treasury securing a receipt which he shall exchange against a Taxation Receipt at the original office issuing the Notice of Payment. In order to facilitate distinction, the commodity tax office shall, when filling in and issuing the Taxation Receipt, further affix a stamp thereon indicating that "The Tax being paid monthly, this Receipt cannot be used as a permit for transportation".

In remote mining regions where no local Public Treasury has yet been erected, the amounts of tax payable as mentions in items 1 and 2 of the preceding paragraph shall be paid by the merchants to the commodity tax office.

Article 6.

(

There it is necessary to process or reprocess already tax mineral products, the merchant shall report it to the competent commodity tax office or the tax officials stationed in the mine, factory or depot, submitting to them the goods and the Torrition Receipt or Permit for Break of Bulk originally secured, who, after verifying that the Receipt or Permit corresponds to the goods, shall affix on the Receipt or Permit a stamp of inspection as well as a stamp indicating "Back to the Factory for Reprocessing". Then the goods leaves the factory after the processing or reprocessing is completed, the same merchant shall submit the original stampel Receipt or Permit to the commodity tax office or the tax officials stationed in the mine, factory or depot, who shall, after examination, MONTHLY BULLETIN NO.XXI - October 1943 - Annex MXIX - Fage 2

compute the supplementary amount of tax to be paid, by deducting the amount of tax originally paid from the amount payable for the processed or reprocessed goods, and shall also stand the original neceipt of Permit as being "Cancelled", but annotating it with the number of the (new) Textion neceipt issued. If the reprocesses goods is contained in a package, (the tax officials) shall further see that a Certificate of Reprocessing is assimate on the surface of the paskage, to which they shall also add the office's stand with the date being indicated. Then the goods is allowed to be transported.

The commodity tax office handling the collection of supplementary taxes or the tax officials stationed in the mine, factory or depot shall every month make it a special duty of forwarding the original Receipts or Permits stamped "Cancelled", together with the counterfoils of Taxation Receipts issued, on to the Bureau of Taxation for examination and checking up.

#### article 7.

Mineral products imported from abroad shall be endighted from the mineral product tax upon presentation for inspection of the accument certifying the payment of import duty to the Custo of House. If after import, the goods are to be retransported or transported in separate lots within this country, the merchants shall submit their Certificate of Import Duty to the local commodity with office, applying for its exchange against Permit's for Break of Bulk of Mineral Products according to the procedure provided in article 10 of these Rules.

The above-mentioned Certificate of Import Duty issued by the Customs House shall be governed, mutatis mutandis, by the provisions of Articles 9, 10 and 15 concerning Taxation Receipts.

#### article 8.

where already taxed mineral products are to be sold locally, this shall be mentioned to the (tax) office or tax officials who shall add the words "To be sold Locally" on the Taxation are ceipt. where (the goods) are intended to be transported and sold in other places, mention of these places shall also be made (to the tax office or tax officials) so that they may be indicated on the Receipt.

#### article 9.

Within the effective period of the Taxation Receipt, application may be made for changing the destination of already taxed mineral products or for breaking the bulk, while after the expiry of that period they can only be sold locally. But if (delay) has adjually been caused by special transport or business conditions, the merchant may make a statement of his grounds to the compatint commodity tax office which shall, after checking up, grant a certain postponement of the tive limit and at the same time report the ease to the Bureau of Taxat on for purposes of reference.

### Article 10.

Men application is made for changing the destination or breaking the bulk of already taxed meneral products, a report shall be submitted to the compatent commodity tax office in charge of issuing Permits for Break of Bulk, setting forth the actual quantity of glods still remaining in stock, the serial number of the Taxation Receipt or Fermit for Break of Bulk and that of the stanged Permit - exception being made for the latter if no stamped permit is required. The said office, after sending officials to investigate and check up that the Receipt of Permit corresponds to the goods,

shall issue a (new) Permit for Break of Bulk according to the quali tity actually remaining in stock. If a part of the remaining stock of goods cannot be transported to other places together with the rest, mention thereof shall be made to the office which issues year with for Break of Bulk, requesting it to add an annotation to the Permit for Break of Bulk, indicating that this part of the goods is to be sold locally.

. Article 11. Permits for Break of Bulk shall be issued by the brance, commodity tax bureaus under the Commodity Tax Tureau of the respective region or by the bureaus directly under its jurisdiction, other tax collecting offices of various localities shall not issue any Fermit for Break of Bulk unless approval has been granted by the Tureau of Taxation.

The officials sho issue Taxation Acceipts, shall fir indicate on the Acceipts the exact Deginning and ending dates their effective period

article 13.

The effective period of a Taxation Receipt shall a year, beginning to count from the date of the issue of the Receipt shall a period of the issue of the Receipt shall a period of the issue of the Receipt shall a period of the issue of the Receipt shall a period of the Issue of the Receipt shall a period of the Issue of the Receipt shall a period of the Issue of the Receipt shall a period of the Issue of the Receipt shall be period of the Issue of the Receipt shall be period of the Issue of the Receipt shall be period of the Issue of the Receipt shall be period of the Issue of the Receipt shall be period of the Issue of the Receipt shall be period of the Issue The effective eriod of the faxution receipt shall also be in-scribed in any newly issued remark for Break of Bulk, whose ef-fective period shall expire on the same date as that for the Taxation Receipt.

rticle 14.

there werehants state the destinations to which (that. goods) are to be transported, the officials who issue Taxation. Receipts in conformity with item 1 of the first paragraph of article 5 or who issue Permits for Break of Bulk in exchange against Taxation Receipts, shall, after considering the actual requirement, indicate the period of transportation in the Receipt or Permit. If for legitimate reasons, (the goods) have not recond their destination on the expiry of the period, the merchant may make a statement to the competent commonity tax office of the place where the goods are located, which shell, after inspecting, grant a certain prolongation of the time limit and also report the case to its superior competent office for purposes of reference.

Article 15.

Merchants shall carefully keep in safety their Taxition Receipts, Permits for Break of Bulb is well as the Stamped Permits affixed on the surface wrapping of the packages of their goods. If any Taxation Receipt or Permit for Break of Bulk has been lost or the Stamped remait affixed on any goods has completely drapped off without leaving any trace, then only after a new tax agreent is made according to the rules, are the goods allowed to be traces ported and sold.
